You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.717 CHARGEPLAN-138

Message

```
The charge plan item "{chargePlanItemId}" at index {chargePlanItemIndex} is
already referencing the Charge Component "{originalChargeComponentId}" and
cannot reference
the Charge Component "{newChargeComponentId}" at the same time.
```

Legend

- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item within the charge plan
- `{originalChargeComponentId}`: The original ID of the Charge Component
- `{newChargeComponentId}`: The new ID of the Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use the Charge Component already referenced by the charge plan item or create a new charge plan item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.718 CHARGEPLAN-139

Message

```
Internal server error. Impossible to modify the charge plan because the charge
plan item "{chargePlanItemId}" at index {chargePlanItemIndex} refers to an
incompatible
Charge Component "{chargeComponentId}". To be compatible, a Charge Component
must have an
Internal Reference Dictionary with typed references.
```

Legend

- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item within the charge plan
- `{chargeComponentId}`: The ID of the Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.734 CHARGEPLAN-155

Message

```
The currency Parameter "{parameterName}" at index {parameterIndex} is
unnecessary because the referred Charge Component "{chargeComponentId}" has a
fixed currency.
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{chargeComponentId}`: The identifier of the referred Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove this Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.735 CHARGEPLAN-156

Message

```
The currency Parameter "{parameterName}" at index {secondIndex} is unnecessary
because another one is already present in Parameter or Parameter Reference list.
```

Legend

- `{parameterName}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the currency within Parameters

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove this Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.736 CHARGEPLAN-157

Message

```
The currency Parameter value "{parameterValue}" at index {parameterIndex}
is unknown by the SAP Convergent Charging system.
```

Legend

- `{parameterValue}`: The value of the Parameter
- `{parameterIndex}`: The index of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Find a valid currency value using `exportCurrencies` operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.739 CHARGEPLAN-160

Message

```
The currency of the Dependent Charge "{dependentChargeId}" ({dependentCurrency})
must be the same as the Master Charge "{masterChargeComponentId}"
({masterCurrency}) because
the adjustment mode of the dependent is merging or splitting.
```

Legend

- `{dependentChargeId}`: The identifier of the Dependent Charge Component
- `{dependentCurrency}`: The currency of the Dependent Charge Component
- `{masterChargeComponentId}`: The identifier of the Master Charge Component
- `{masterCurrency}`: The currency of the Master Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the adjustment mode or remove the dependency.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.740 CHARGEPLAN-161

Message

```
The Master charge plan item "{masterChargePlanItemId}" and the Dependent
charge plan item "{dependentChargePlanItemId}" must define their currency at the
same level
and with the same value because the adjustment mode of the dependent is merging
or splitting.
```

Legend

- `{masterChargePlanItemId}`: The identifier of the Master charge plan item
- `{dependentChargePlanItemId}`: The identifier of the Dependent charge plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Define the both charges currency at the charge plan item level and with the same value.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.741 CHARGEPLAN-162

Message

```
The Master charge plan item "{masterChargePlanItemId}" refers to the charge
plan Currency parameter "{masterChargePlanCurrencyParam}" and the Dependent
charge plan item
"{dependentChargePlanItemId}" refers to the Charge Plan Currency parameter
"{dependentChargePlanCurrencyParam}",
but they must both refer to the same parameter because the adjustment mode of
the dependent
is merging or splitting.
```

Legend

- `{masterChargePlanItemId}`: The identifier of the Master charge plan item
- `{masterChargePlanCurrencyParam}`: The currency of the Master charge plan item
- `{dependentChargePlanItemId}`: The identifier of the Dependent charge plan item
- `{dependentChargePlanCurrencyParam}`: The charge plan parameter that the Dependent charge plan item refers to

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Make both charge plan items currency parameter refer to the same charge plan currency parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.742 CHARGEPLAN-163

Message

```
The master Charge Component "{masterChargeComponentId}" is multiCurencies
and the Dependent Charge Component "{dependentChargeComponentId}" is
monoCurrency, but this
case is not supported because the adjustment mode of the dependent is merging or
splitting.
```

Legend

- `{masterChargeComponentId}`: The identifier of the Master Charge Component
- `{dependentChargeComponentId}`: The identifier of the Dependent Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the adjustment mode or remove the dependency.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.747 CHARGEPLAN-168

Message

```
The service name "{serviceName}" of the User Technical Identifier Reference
at index {userTechnicalIdentifierReferenceIndex} is missing is not ASCII.
Invalid characters
are "{invalidCharacters}".
```

Legend

- `{serviceName}`: The name of the service, as provided
- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference within the charge plan item
- `{invalidCharacters}`: A CSV string of non-ASCII characters

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Replace the invalid characters of service name with ASCII characters.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.748 CHARGEPLAN-169

Message

```
The service name "{serviceName}" of the User Technical Identifier Reference
at index {userTechnicalIdentifierReferenceIndex} has more than 128 characters.
```

Legend

- `{serviceName}`: The name of the service, as provided
- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference within the charge plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Shorten the service name to 128 ASCII characters.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Enrich your SAP user experience and join our community of professionals:

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.750 CHARGEPLAN-171

Message

```
The data type of the parameter is not defined.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add this additional information or remove all additional informations.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.767 CHARGEPLAN-188

Message

```
The code of the charged item class ({chargedItemClassCode}) referenced
by the charge plan item "{chargePlanItemId}" at index {chargePlanItemIndex} does
not match
any Charged Item Class.
```

Legend

- `{chargedItemClassCode}`: The code of the Charged Item Class
- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the ID of an existing Charged Item Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> → Recommendation
>
> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.784 CHARGEPLAN-206

Message

```
The account assignment "{accountAssignmentName}" cannot be added because
the charge plan "{chargePlanId}" has been released.
```

Legend

- `{accountAssignmentName}`: The name of the Account Assignment
- `{chargePlanId}`: The ID of the charge plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Create a new charge plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.801 CHARGEPLAN-223

Message

```
The relationship type of the charge plan item "{chargePlanItemId}" cannot
be modified because the charge plan "{chargePlanId}" has been released.
```

Legend

- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanId}`: The ID of the charge plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Create a new charge plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.810 CHARGEPLAN-232

Message

```
The charge plan Parameter "{cpParameterName}" referenced by the Parameter
Reference "{parameterReferenceName}" at index {parameterReferenceIndex} is not
declared as
an invoice text.
```

Legend

- `{cpParameterName}`: The name of the charge plan Parameter
- `{parameterReferenceName}`: The name of the charge plan item Parameter Reference
- `{parameterReferenceIndex}`: The index of the charge plan item Parameter Reference

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Declare the invoice text data type additional information in the charge plan Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.817 CHARGEPLAN-239

Message

```
The VAT rule "{vatRuleId}" referenced by the charge plan item
"{chargePlanItemId}"
    at index {chargePlanItemIndex} does not match any known VAT rule.
```

Legend

- `{vatRuleId}`: The ID of the VAT rule
- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the ID of an existing VAT rule.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.818 CHARGEPLAN-240

Message

```
The VAT rule referenced by the charge plan item "{chargePlanItemId}" at index
{chargePlanItemIndex} must not be set as a property, but as a fixed value
```

```
matching an
existing VAT rule ID.
```

Legend

- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the ID of an existing VAT rule.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.834 CHARGEPLAN-256

Message

```
The name "{chargedItemMappingEntryName}" of the Charged Item Mapping Entry
at index {index} does not exist in the Charged Item Class
"{chargedItemClassCode}" of the
Charge Plan Item "{chargePlanItemId}".
```

Legend

- `{chargedItemMappingEntryName}`: The unknown name
- `{index}`: The index of the unknown name within Charged Item Mapping Entries
- `{chargedItemClassCode}`: The code of the Charged Item Class of the Charge Plan Item

- `{chargePlanItemId}`: The ID of the Charge Plan Item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the Charged Item Mapping Entry or remove the entry.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.835 CHARGEPLAN-257

Message

```
The initial value of the Counter "{counterName}" at index {counterIndex}
is forbidden.
```

Legend

- `{counterName}`: The name of the Counter
- `{counterIndex}`: The index of the Counter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the initial value of the Counter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.836 CHARGEPLAN-258 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The code of the charged item class ({chargedItemClassCode}) referred to
by the charge plan item "{chargePlanItemId}" cannot be changed to
({newChargedItemClassCode}).
```

Legend

- `{chargedItemClassCode}`: The original code of the Charged Item Class
- `{chargePlanItemId}`: The ID of the charge plan item
- `{newChargedItemClassCode}`: The new code of the Charged Item Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the ID of the original charged item class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.837 CHARGEPLAN-259

Message

```
Parameter "{parameterName}" at index {parameterIndex} points to the range
table "{parameterValue}" which is not an instance of the previously defined
range table
class "{rangeTableClass}".
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{parameterValue}`: The value of the Parameter
- `{rangeTableClass}`: The range table class of the charge plan Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the value to a known range table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Message

```
The property "{propertyName}" specified in the Charged Item Mapping Entry
"{chargedItemMappingEntryName}" is not allowed in a Charge Plan.
```

Legend

- `{propertyName}`: The name of the forbidden property
- `{chargedItemMappingEntryName}`: The name of the Charged Item Mapping Entry

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the name of a property allowed in Charge Plans.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.851 CHARGEPLAN-274

Message

```
The Response Charged Item Mapping does not contain the entry
"{missingChargedItemMappingEntryName}".
This entry has no value or the value is not applicable in this context in the
Charged Item
Class "{chargedItemClassName}".
```

Legend

- `{missingChargedItemMappingEntryName}`: The name of the missing entry in the Response Charged Item Mapping
- `{chargedItemClassName}`: The name of the Charged Item Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the missing entry in the Charged Item Mapping.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.852 CHARGEPLAN-275

Message

```
The service name "{serviceName}" of the User Technical Identifier Reference
at index {userTechnicalIdentifierReferenceIndex} is reserved for internal use.
```

Legend

- `{serviceName}`: The name of the service, as provided
- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference within the charge plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the service name to a value that is not reserved for internal use.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.853 CHARGEPLAN-276

Message

```
The reporting scope "session" cannot be used in a dependent charge plan item.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the reporting scope "session" from the charge plan item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.854 CHARGEPLAN-277

Message

```
The currency Parameter Reference "{parameterReferenceName}" at index
{parameterReferenceIndex} is not necessary because the related Charge Component
"{chargeComponentId}" has a fixed currency.
```

Legend

- `{parameterReferenceName}`: The name of the Parameter Reference
- `{parameterReferenceIndex}`: The index of the Parameter Reference
- `{chargeComponentId}`: The identifier of the related Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove this Parameter Reference.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.855 CHARGEPLAN-278

Message

```
The currency Parameter Reference "{parameterReferenceName}" at index
{parameterReferenceIndex} is not necessary because the currency is already
specified in the
list of Parameters or Parameter References.
```

Legend

- `{parameterReferenceName}`: The name of the Parameter Reference
- `{parameterReferenceIndex}`: The index of the Parameter Reference

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove this Parameter Reference.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.856 CHARGEPLAN-279

Message

```
The currency Parameter value "{parameterValue}" at index {parameterIndex}
is unknown by the SAP Convergent Charging system.
```

Legend

- `{parameterValue}`: The value of the Parameter
- `{parameterIndex}`: The index of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify a valid currency value in the Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.864 CHARGEPLAN-287

Message

```
The charge component referenced by the charge plan item "{chargePlanItemId}"
at index {chargePlanItemIndex} has the flag ManagedByCockpit set to
"{isChargeComponentCockpitCompatible}"
```

```
whereas the charge plan has the same flag set to
"{isChargePlanCockpitCompatible}".
```

Legend

- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item
- `{isChargeComponentCockpitCompatible}`: The value of the attribute ManagedByCockpit in the charge component
- `{isChargePlanCockpitCompatible}`: The value of the attribute ManagedByCockpit in the charge plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add charge components where ManagedByCockpit has the same value as the charge plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.865 CHARGEPLAN-288

Message

```
The charge component referenced by the charge plan item "{chargePlanItemId}"
at index {chargePlanItemIndex} is already referenced by the charge plan
"referencingChargePlanId".
```

Legend

- `{chargePlanItemId}`: The ID of the charge plan item
- `{chargePlanItemIndex}`: The index of the charge plan item
- `{referencingChargePlanId}`: The ID of the charge plan which references the charge component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify a charge component which is not already referenced by a charge plan item of another charge plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 2023 FPS 0 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.867 CHARGEPLAN-290

Message

```
The parameter "{parameterName}" at index "{parameterIndex}" must be modifiable
because it has a value and a charge plan class visibility.
```

Legend

- `{parameterName}`: The name of the parameter
- `{parameterIndex}`: The index of the parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the visibility level of the parameter.

Save your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.868 CHARGEPLAN-291

Message

```
A charge plan managed by Cockpit cannot be converted to a charge plan managed
by Core Tool because it references Pricing Functions.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use Cockpit user interface to edit the charge plan.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.869 CHARGINGPLAN-1

Message

```
Rate operation failed for usage rate "{usageRateName}".
```

Legend

- `{usageRateName}`: The name of the usage rate

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Fix the usage rate component, or one of its children.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.877 CHARGINGPLAN-9

Message

```
Invalid delimitation ''{stringDelimitation}'' used for the conversion from
type String to type Multi-Valued String in component ''{componentName}''.
```

Legend

- `{stringDelimitation}`: string delimitation
- `{componentName}`: The component name

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Define a delimitation character of exactly one character long.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.878 CHARGINGPLAN-10

Message

```
Invalid delimitation ''{stringDelimitation}'' used for the conversion from
type String to type Multi-Valued Number in component ''{componentName}''
```

Legend

- `{stringDelimitation}`: string delimitation
- `{componentName}`: The component name

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

The string that you define as delimitation to convert String into Multi-Valued Number must respect the following constraints:

- the delimitation string must be exactly one character long
- the delimitation string must be different from the decimal separator
- the delimitation string must be different from the thousand separator

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.879 CHARGINGPLAN-11

Message

```
Invalid decimal separator ''{decimalSeparator}'' used for the conversion from
type String to type Multi-Valued Number in component ''{componentName}''.
```

Legend

- `{decimalSeparator}`: decimal separator
- `{componentName}`: The component name

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Define a decimal separator of exactly one character long.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.881 CHARGINGPLAN-13

Message

```
Invalid conversion from type String to type Multi-Valued Number in component
''{componentName}'', the substring ''{subString}'' from the string
''{wholeString}'' cannot
be converted to a number
```

Legend

- `{componentName}`: The component name
- `{subString}`: part of the string to convert
- `{wholeString}`: string to convert

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

The part of the input string to convert must be a number.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.884 CHARGINGPLAN-16

Message

```
Invalid decimal separator ''{decimalSeparator}'' used for the conversion
from type Multi-Valued String to type Multi-Valued Number in component
''{componentName}''.
```

Legend

- `{decimalSeparator}`: decimal separator
- `{componentName}`: The component name

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Define a decimal separator of exactly on character long.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.886 CHARGINGPLAN-18

Message

```
Invalid conversion from type Multi-Valued String to type Multi-Valued Number
in component ''{componentName}'', the field ''{subString}'' cannot be converted
to a number.
```

Legend

- `{componentName}`: The component name
- `{subString}`: part of the string to convert

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Every field of the Multi-Valued String must be convertible to a number.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.901 CHARGINGPLAN-33

Message

```
Rating operation failed for Account Event Refill rate component
"{accountEventRefillRateName}".
```

Legend

- `{accountEventRefillRateName}`: The name of the accountEventRefill rate

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Fix the Account Event Refill rate component, or one of its children.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.902 CHARGINGPLAN-34

Message

```
The date "{toDate}" specified for an activation or a charging operation
is too far in the future considering the value of the parameter
PERIOD_LIMIT_ACTIVATION
("{periodLimitActivation}") and the current system date.
```

Legend

- `{toDate}`: The consumption date or the date at which the activation process is run
- `{periodLimitActivation}`: The runtime value of the parameter PERIOD_LIMIT_ACTIVATION

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the business operation requests, change the activation date or the consumption date to a date before the period limit. Verify if the value of the parameter PERIOD_LIMIT_ACTIVATION is correct depending on the business requirements.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.903 CHARGINGPLAN-35

Message

```
The technical configuration of the shared allowances feature is not complete.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set a positive value for the following parameters: DISTRIBUTED_COUNTER_RESERVATION_POOL_SIZE, DISTRIBUTED_COUNTER_CLEANUP_POOL_SIZE and DISTRIBUTED_COUNTER_CHECK_POOL_SIZE

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.918 CICLASS-15

Message

```
Impossible to modify the chargeable item class {chargeableItemClassId}
because the following properties are missing: {missingPropertyName}.
```

Legend

- `{chargeableItemClassId}`: The ID of the chargeable item class
- `{missingPropertyName}`: The name of the missing properties in the chargeable item class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the missing properties to the operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.936 CONTRACT-7

Message

```
Impossible to create the provider contract because its ID already exists:
{chargingContractId}.
```

Legend

- `{chargingContractId}`: The ID of the provider contract that needs to be changed

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the ID of the provider contract in the operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.937 CONTRACT-8

Message

```
The date is missing in the modify provider contract operation.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify a date in the operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.938 CONTRACT-9

Message

```
The provider contract is missing in the modify provider contract operation.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a provider contract in the operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.939 CONTRACT-10

Message

```
The charging contract with the ID {chargingContractId} does not exist.
```

Legend

- `{chargingContractId}`: The ID of the provider contract which does not exist

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the identifier of the contract to an existing one or create the provider contract first.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.941 CONTRACT-12

Message

```
Impossible to modify the contract because the subscriber ID
{specifiedSubscriberAccountId}
specified in the operation does not correspond to the subscriber ID
{realSubscriberAccountId}
which already exists in the provider contract.
```

Legend

- `{specifiedSubscriberAccountId}`: The subscriber ID specified in the operation
- `{realSubscriberAccountId}`: The subscriber ID which already exists in the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the subscriber ID to the existing one {1} or create a new provider contract for the specified subscriber ID {0}.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.942 CONTRACT-13

Message

```
Impossible to modify the provider contract because the subscriber account
service provider name {specifiedSubscriberAccountServiceProviderName} specified
in the
operation does not correspond to the subscriber account service provider name
{realSubscriberAccountServiceProviderName} which already exists in the provider
contract.
```

Legend

- `{specifiedSubscriberAccountServiceProviderName}`: The subscriber account service provider name specified in the operation
- `{realSubscriberAccountServiceProviderName}`: The subscriber account service provider name which already exists in the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the subscriber account service provider name to the existing one {1} or create a new provider contract for the specified subscriber account service provider name {0}.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.948 CONTRACT-19

Message

```
The ID "{chargingContractItemId}" of the contract item at index {secondIndex}
is already used by the contract item at index {firstIndex}. Two contract items
cannot have
the same identifier.
```

Legend

- `{chargingContractItemId}`: The duplicated ID
- `{secondIndex}`: The index of the second occurrence of the ID within contract items
- `{firstIndex}`: The index of the first occurrence of the ID within contract items

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the ID of the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.949 CONTRACT-20

Message

```
The chargePlanClassId, the refillPlanClassId or the monitoringPlanClassId
of the contract item "{chargingContractItemId}" at index
{chargingContractItemIndex} is missing.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a chargePlanClassId, a refillPlanClassId or a monitoringPlanClassId to the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.953 CONTRACT-24

Message

```
Error while validating the contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.954 CONTRACT-25

Message

```
The name of the User Technical Identifier at index {userTechIdIndex} is
missing.
```

Legend

- `{userTechIdIndex}`: The index of the User Technical Identifier within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a name to the User Technical Identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.955 CONTRACT-26

Message

```
Impossible to create the linked contract because its parent contract
"{chargingContractId}" does not exist.
```

Legend

- `{chargingContractId}`: The ID of a parent contract that does not exist

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the ID of the parent contract or first create a new contract with this identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.956 CONTRACT-27

Message

```
The User Technical Identifier "{userTechIdName}" at index {userTechIdIndex}
does not exist in the referred charge plan class "{chargePlanClassId}".
```

Legend

- `{userTechIdName}`: The name of the User Technical Identifier
- `{userTechIdIndex}`: The index of the User Technical Identifier
- `{chargePlanClassId}`: The ID of the referred charge plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the User Technical Identifier or change its name to a User Technical Identifier which exists in the charge plan class

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.957 CONTRACT-28

Message

```
Impossible to modify the linked contract because the parent contract ID
{specifiedchargingContractId} specified in the operation request does not
correspond to the
```

```
parent contract ID {realchargingContractId} which already exists in the linked
contract.
```

Legend

- `{specifiedchargingContractId}`: The provider contract ID specified in the operation
- `{realchargingContractId}`: The provider contract ID which already exists in the linked provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the provider contract ID to the existing one {1}.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.958 CONTRACT-29

Message

```
The User Service Identifier (USID) of the user technical identifier
"{userTechIdName}" at index {userTechIdIndex} is empty.
```

Legend

- `{userTechIdName}`: The name of the User Technical Identifier
- `{userTechIdIndex}`: The index of the User Technical Identifier

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify the user service identifier or remove this empty user technical identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.959 CONTRACT-30 (Revoked)

> ⚠ Caution
>
> This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The User Technical Identifier "{userTechIdName}" of the referred charge plan
class "{chargePlanClassId}" is not declared in the contract item.
```

Legend

- `{userTechIdName}`: The name of the User Technical Identifier
- `{chargePlanClassId}`: The ID of the referred Charge Plan Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Link the User Technical Identifier or remove it.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.960 CONTRACT-31

Message

```
The charge plan class "{chargePlanClassId}" referred by the contract item
"{chargingContractItemId}" at index {chargingContractItemIndex} is unknown.
```

Legend

- `{chargePlanClassId}`: The ID of the Charge Plan Class
- `{chargingContractItemId}`: The ID of the contract item

- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the chargePlanClassId to an existing charge plan class identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.963 CONTRACT-34

Message

```
The name "{accountAssignmentName}" of the Account Assignment at index
{secondIndex}
is already used by the Account Assignment at index {firstIndex}.
```

Legend

- `{accountAssignmentName}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name within Account Assignments
- `{firstIndex}`: The index of the first occurrence of the name within Account Assignments

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the Account Assignment.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.964 CONTRACT-35

Message

```
The Account Assignment "{accountAssignmentName}" at index
{accountAssignmentIndex}
does not exist in the referred charge plan class "{chargePlanClassId}".
```

Legend

- `{accountAssignmentName}`: The name of the Account Assignment
- `{accountAssignmentIndex}`: The index of the Account Assignment
- `{chargePlanClassId}`: The identifier of the referred charge plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the Account Assignment or give the name of an Account Assignment which already exists in the charge plan class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.965 CONTRACT-36

Message

```
Internal server error. Impossible to delete the provider contract
"{chargingContractId}"
because it has, at least, one provider contract linked to it.
```

Legend

- `{chargingContractId}`: The ID of the provider contract that cannot be deleted

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete the linked provider contract(s) first.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.966 CONTRACT-37

Message

```
Impossible to create the linked contract because the parent contract ID
{chargingContractId} specified in the operation request actually matches a
linked contract.
```

Legend

- `{chargingContractId}`: The specified contract ID that corresponds to a linked contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify another parent contract in the operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to 4.0 SP00. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.970 CONTRACT-41 (Revoked)

> ⚠ Caution
>
> This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The name "{additionalInformationName}" of the Additional Information at index
{secondIndex} is already used by the Additional Information at index
{firstIndex}.
```

Legend

- `{additionalInformationIndex}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name within Additional Informations
- `{firstIndex}`: The index of the first occurrence of the name within Additional Informations

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the Additional Information.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.971 CONTRACT-42 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The type of the Additional Information "{additionalInformationName}" at
index {additionalInformationIndex} is missing or unknown. The supported types
```

```
are: String,
number, and date.
```

Legend

- `{additionalInformationName}`: The name of the Additional Information
- `{additionalInformationIndex}`: The index of the Additional Information

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a type to the Additional Information or change it to a valid type.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.986 CONTRACT-57

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
is already referencing the Charge Plan Class "{originalChargePlanClassId}" and
cannot reference
the Charge Plan Class "{newChargePlanClassId}" at the same time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract
- `{originalChargePlanClassId}`: The ID of the Charge Plan Class which is already referenced by the contract item
- `{newChargePlanClassId}`: The ID of the Charge Plan Class to be referenced

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use the Charge Plan Class which is already referenced by the contract item or create a new contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.987 CONTRACT-58

Message

```
The access (user "{user}" / service "{service}") cannot be created because
it already exists.
```

Legend

- `{user}`: The user access
- `{service}`: The service access

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Modify the access.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.988 CONTRACT-59

Message

```
The end date {endDate} declared in the contract item "{chargingContractItemId}"
at index {chargingContractItemIndex} is before or equal to the operation date
{operationDate}.
```

Legend

- `{endDate}`: The end date of the contract item
- `{chargingContractItemId}`: The contract item identifier
- `{chargingContractItemIndex}`: The contract item index
- `{operationDate}`: The provider contract operation date

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Modify the end date to a date strictly after the operation date.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.989 CONTRACT-60

Message

```
The Refill Plan Class "{refillPlanClassId}" referred by the contract item
"{chargingContractItemId}" at index {chargingContractItemIndex} is unknown.
```

Legend

- `{refillPlanClassId}`: The ID of the Refill Plan Class
- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the refillPlanClassId to an existing Refill Plan Class identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.990 CONTRACT-61

Message

```
The Refill Plan Class "{refillPlanClassId}" referred by the contract item
"{refillPlanClassId}" at index {chargingContractItemIndex} is unknown.
```

Legend

- `{refillPlanClassId}`: The ID of the Refill Plan Class
- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the refillPlanClassId to an existing Refill Plan Class identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.991 CONTRACT-62

Message

```
Internal server error. Impossible to modify the provider contract because
the contract item "{chargingContractItemId}" at index
{chargingContractItemIndex} is not found on the server.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.992 CONTRACT-63

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
is already referencing the Refill Plan Class "{originalRefillPlanClassId}" and
cannot reference
the Refill Plan Class "{newRefillPlanClassId}" at the same time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract
- `{originalRefillPlanClassId}`: The ID of the Refill Plan Class which is already referenced by the contract item
- `{newRefillPlanClassId}`: The ID of the Refill Plan Class to be referenced

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use the Refill Plan Class which is already referenced by the contract item or create a new contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.993 CONTRACT-64

Message

```
Only one of chargePlanClassId, refillPlanClassId and monitoringPlanClassId
can be set in the contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Keep only one of the chargePlanClassId, the refillPlanClassId or the monitoringPlanClassId in the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.994 CONTRACT-65

Message

```
The name of the shared counter at index {sharedCounterIndex} is missing.
```

Legend

- `{sharedCounterIndex}`: The index of the shared counter within the contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a name to the shared counter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.995 CONTRACT-66

Message

```
The name "{sharedCounterName}" of the shared counter at index {secondIndex}
is already used by the shared counter at index {firstIndex}.
```

Legend

- `{sharedCounterName}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name within shared counters
- `{firstIndex}`: The index of the first occurrence of the name within shared counters

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the shared counter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.996 CONTRACT-67

Message

```
The shared counter "{sharedCounterName}" at index {sharedCounterIndex}
does not exist in the referred Charge Plan Class "{chargePlanClassId}".
```

Legend

- `{sharedCounterName}`: The name of the shared counter
- `{sharedCounterIndex}`: The index of the shared counter
- `{chargePlanClassId}`: The identifier of the referred Charge Plan Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the shared counter or change its name to a Counter which exists in the Charge Plan Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.997 CONTRACT-68

Message

```
The {accountType} account "{accountId}" is not found.
```

Legend

- `{accountType}`: The identifier of the account type
- `{accountId}`: The identifier of the account

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set an account identifier that referenced an existing account.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.998 CONTRACT-69

Message

```
The currency parameter value "{parameterValue}" at index {parameterIndex}
is unknown by the SAP CC system.
```

Legend

- `{parameterValue}`: The value of the Parameter
- `{parameterIndex}`: The index of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Find a valid currency value using the `exportCurrencies` operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1000 CONTRACT-71

Message

```
Duplicate access for service "{serviceAccess}" and user identifier
"{identifierAccess}"
is defined in provider contract "{chargingContractId}" in contract item
"{firstChargingContractItemId}"
linked to Charge Plan Item "{firstChargePlanItemId}" in Charge Plan
"{firstChargePlanId}"
and in contract item "{secondChargingContractItemId}" linked to Charge Plan Item
"{secondChargePlanItemId}" in charge plan "{secondChargePlanId}".
```

Legend

- `{serviceAccess}`: The service of the duplicate access
- `{identifierAccess}`: The identifier of the duplicate access
- `{chargingContractId}`: The identifier of the contract
- `{firstChargingContractItemId}`: The identifier of the first contract item
- `{firstChargePlanItemId}`: The identifier of the first charge plan item
- `{firstChargePlanId}`: The identifier of the first charge plan
- `{secondChargingContractItemId}`: The identifier of the second contract item
- `{secondChargePlanItemId}`: The identifier of the second charge plan item
- `{secondChargePlanId}`: The identifier of the second charge plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the contract configuration.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1002 CONTRACT-73

Message

```
The batch rating group identifier returned by the implementation of the batch
rating group assignment policy is null.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the implementation of the batch rating group assignment policy. The batch rating group assignment policy is defined by the parameter BATCH_RATING_GROUP_ASSIGNMENT_POLICY_CLASS.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1003 CONTRACT-74

Message

```
The code of the batch rating group identifier
"{codeOfBatchRatingGroupIdentifier}"
is unknown.
```

Legend

- `{codeOfBatchRatingGroupIdentifier}`: The code of the batch rating group identifier

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the implementation of the batch rating group assignment policy and the configuration of the batch rating groups. The batch rating group assignment policy is defined by the parameter BATCH_RATING_GROUP_ASSIGNMENT_POLICY_CLASS.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1005 CONTRACT-76

Message

```
The batch rating group assignment policy cannot compute the batch rating group
identifier for the provider contract "{chargingContractId}". The message of the
```

```
exception is
"{batchRatingGroupErrorMessage}".
```

Legend

- `{chargingContractId}`: The ID of the provider contract that needs to be changed
- `{batchRatingGroupErrorMessage}`: The error message returned by the implementation of the batch rating group assignment policy

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the implementation of the batch rating group assignment policy and the configuration of the batch rating groups. The batch rating group assignment policy is defined by the parameter BATCH_RATING_GROUP_ASSIGNMENT_POLICY_CLASS.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1006 CONTRACT-77

Message

```
The User Service Identifier "{userServiceId}" of the User Technical Identifier
Reference at index {userTechnicalIdentifierReferenceIndex} is missing is not
ASCII. Invalid
characters are "{invalidCharacters}".
```

Legend

- `{userServiceId}`: The name of the User Service Identifier, as provided
- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference within the Charge Plan Item
- `{invalidCharacters}`: A `CSV` string of non-ASCII characters

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Replace the invalid characters of User Service Identifier with ASCII characters.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1007 CONTRACT-78

Message

```
The User Service Identifier "{userServiceId}" of the User Technical Identifier
Reference at index {userTechnicalIdentifierReferenceIndex} has more than 128
characters.
```

Legend

- `{userServiceId}`: The name of the User Service Identifier, as provided
- `{codeOfBatchRatingGroupIdentifier}`: The index of the User Technical Identifier Reference within the Charge Plan Item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Shorten the service name to 128 ASCII characters.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1008 CONTRACT-79

Message

```
The Parameter "{parameterName}" at index {parameterIndex} points to an unknown
mapping table "{parameterValue}".
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{parameterValue}`: The value of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the value to a known mapping table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1009 CONTRACT-80

Message

```
The Parameter "{parameterName}" at index {parameterIndex} points to a mapping
table "{mappingTableId}" which has an invalid mapping table class
"{mappingTableClass}".
It should be "{parameterMappingTableClass}".
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{mappingTableId}`: The identifier of the Mapping Table
- `{mappingTableClass}`: The Mapping Table Class of the Mapping Table
- `{parameterMappingTableClass}`: The Mapping Table Class of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the parameter value to a mapping table with the correct mapping table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1010 CONTRACT-81

Message

```
The refill access (Service provider "{serviceProvider}" / Subscriber account
code "{subAccountCode}" / Prepaid account code "{prepaidAccountCode}") cannot be
created
```

```
because it is already assigned between "{assignmentStartDate}" and
"{assignmentEndDate}".
```

Legend

- `{serviceProvider}`: The subscriber account service provider
- `{subAccountCode}`: The subscriber account code
- `{prepaidAccountCode}`: The prepaid account code
- `{assignmentStartDate}`: The assignement start date
- `{assignmentEndDate}`: The assignement end date

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the already assigned prepaid account.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1011 CONTRACT-82

Message

```
The access (User Service Identifier "{userServiceId}" / Service Identifier
"{serviceId}") cannot be created because it is already assigned between
"{assignmentStartDate}"
and "{assignmentEndDate}".
```

Legend

- `{userServiceId}`: The access user service ID
- `{serviceId}`: The access service ID
- `{assignmentStartDate}`: The assignement start date
- `{assignmentEndDate}`: The assignement end date

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the already assigned access.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1012 CONTRACT-83

Message

```
The provider contract with the ID {chargingContractId} does not exist.
```

Legend

- `{chargingContractId}`: The ID of the provider contract which does not exist

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the ID of the provider contract to an existing one or create the provider contract first.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1013 CONTRACT-84

Message

```
The Account Assignment "{accountAssignmentName}" at index {firstIndex} of type
postpaid is invalid for contract item pointing to a refill plan.
```

Legend

- `{accountAssignmentName}`: The Account Assignment name
- `{firstIndex}`: The index of the first occurrence of the name within Account Assignments

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Assign a Prepaid Account.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1014 CONTRACT-85

Message

```
The identification code of the prepaid account currency "{accountCurrencyCode}"
differs from the one of the mono currency refill logic
"{refillLogicCurrencyCode}" for the
provider contract item of ID "{chargingContractItemId}" pointing to a Refill
Plan.
```

Legend

- `{accountCurrencyCode}`: The code of the Prepaid Account Currency
- `{refillLogicCurrencyCode}`: The code of the Refill Logic Currency
- `{chargingContractItemId}`: The ID of the contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the currencies of the Prepaid Account and Refill Logic.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1015 CONTRACT-86

Message

```
The status of activated Charge Plan or Refill Plan "{chargePlanId}" is open.
Only released or obsolete Charge Plans and Refill Plans can be activated.
```

Legend

- `{chargePlanId}`: The identifier of the Charge Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the status of activated Charge Plan or Refill Plan to release or obsolete.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1018 CONTRACT-89

Message

```
The currency "{currencyCode}" of the provider contract parameter
"{parameterName}"
is not compatible with any account currency declared in the account assignment
list.
```

Legend

- `{currencyCode}`: The code of the currency
- `{parameterName}`: The name of the provider contract parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the currency of the provider contract parameter or add an account compatible with this currency.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1019 CONTRACT-90

Message

```
The currency "{currencyCode}" of the charge component "{chargeComponentId}"
is not compatible with any account currency declared in the account assignment
list.
```

Legend

- `{currencyCode}`: The code of the currency
- `{chargeComponentId}`: The ID of the charge component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add an account compatible with this currency.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1020 CONTRACT-91

Message

```
The taxation module "{chargePlanItemTaxationModule}" of the charge plan item
"{chargePlanItemId}" is not compatible with the taxation module
"{accountTaxationModule}" of
the account declared in the account assignment list.
```

Legend

- `{chargePlanItemTaxationModule}`: The charge plan item taxation module
- `{chargePlanItemId}`: The ID of the charge plan item
- `{accountTaxationModule}`: The account taxation module

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the taxation module value of the charge plan item or add an account compatible with this taxation module.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1021 CONTRACT-92

Message

```
The Parameter "{parameterName}" at index {parameterIndex} points to an
unknown range table "{parameterValue}".
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{parameterValue}`: The value of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the value to a known range table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1022 CONTRACT-93

Message

```
The Parameter "{parameterName}" at index {parameterIndex} points to a range
table "{rangeTableId}" which has an invalid range table class
"{rangeTableClass}". It should
be "{parameterRangeTableClass}".
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{rangeTableId}`: The identifier of the Range Table
- `{rangeTableClass}`: The Range Table Class of the Range Table
- `{parameterRangeTableClass}`: The Range Table Class of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the parameter value to a range table with the correct range table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1023 CONTRACT-94

Message

```
The name of the counter shared with other contracts at index
{pooledCounterIndex}
is missing.
```

Legend

- `{pooledCounterIndex}`: The index of the counter shared with other contracts within the contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a name to the counter shared with other contracts.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1024 CONTRACT-95

Message

```
The name "{pooledCounterName}" of the counter shared with other contracts at
index {secondIndex} is already used by the counter at index {firstIndex}.
```

Legend

- `{pooledCounterName}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name within the counter shared with other contracts
- `{firstIndex}`: The index of the first occurrence of the name within the counter shared with other contracts

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the counter shared with other contracts.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1025 CONTRACT-96

Message

```
The shared counter "{pooledCounterName}" at index {pooledCounterIndex} does
not exist in the referred Charge Plan Class "{chargePlanClassId}".
```

Legend

- `{pooledCounterName}`: The name of the counter shared with other contracts
- `{pooledCounterIndex}`: The index of the counter shared with other contracts
- `{chargePlanClassId}`: The identifier of the referred Charge Plan Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the counter shared with other contracts or change its name to a Counter which exists in the Charge Plan Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1026 CONTRACT-97

Message

```
The name "{pooledCounterName}" of the counter at index {secondIndex} is already
used by the shared counter at index {firstIndex}.
```

Legend

- `{pooledCounterName}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name within the counter shared with other contracts
- `{firstIndex}`: The index of the first occurrence of the name within the shared counters

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the counter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1028 CONTRACT-99

Message

```
The counter "{pooledCounterName}" at index {firstIndex} cannot be shared
with other contracts because is not declared in the parent contract
"{chargingContractId}".
```

Legend

- `{pooledCounterName}`: The duplicated name

- `{firstIndex}`: The index of the counter name within the counter shared with other contracts
- `{chargingContractId}`: The ID of the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the counter to an existing one or add the counter to the parent contract.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1032 CONTRACT-104

Message

```
Impossible to modify the provider contract because the counter shared with
other contracts "{pooledCounterName}" is still referenced in the contract item
"{linkedChargingContractItemId}" of the linked provider contract
```

```
"{linkedChargingContractId}"
during the period "{period}".
```

Legend

- `{pooledCounterName}`: The removed counter name
- `{linkedChargingContractItemId}`: The ID of the linked contract item
- `{linkedChargingContractId}`: The ID of the linked provider contract
- `{period}`: The period where the counter is referenced

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the counter shared with other contracts in the linked provider contract first.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1033 CONTRACT-105

Message

```
The monitoring plan class "{monitoringPlanClassId}" referred by the contract
item
"{chargingContractItemId}" at index {chargingContractItemIndex} is unknown.
```

Legend

- `{monitoringPlanClassId}`: The ID of the monitoring plan class
- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the monitoringPlanClassId to an existing monitoring plan class identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1034 CONTRACT-106

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
already refers to a plan class "{originalPlanClassId}" (type:
{originalPlanClassType}) and
cannot be changed to refer to the monitoring plan class
"{newMonitoringPlanClassId}" at the
same time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract
- `{originalPlanClassId}`: The ID of the plan class which is already referenced by the contract item
- `{originalPlanClassType}`: The type of the plan class which is already referenced by the contract item
- `{newMonitoringPlanClassId}`: The other ID of a monitoring plan class to be referenced. This ID is specified in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP04 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1035 CONTRACT-107

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
already refers to the monitoring plan class "{originalMonitoringPlanClassId}"
and cannot be
changed to refer to "{newMonitoringPlanClassId}" at the same time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract
- `{originalMonitoringPlanClassId}`: The ID of the monitoring plan class which is already referenced by the contract item
- `{newMonitoringPlanClassId}`: The other ID of a monitoring plan class to be referenced. This ID is specified in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the ID of the monitoring plan class which is already referenced by the contract item or create a new contract item. Change the modify operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1036 CONTRACT-108

Message

```
The monitoring plan class "{monitoringPlanClassId}" referred to by the
contract item "{chargingContractItemId}" at index {chargingContractItemIndex} is
unknown.
```

Legend

- `{monitoringPlanClassId}`: The ID of the monitoring plan class
- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the monitoringPlanClassId to an existing monitoring plan class identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1037 CONTRACT-109

Message

```
The User Technical Identifier (UTI) "{userTechIdName}" at index
{userTechIdIndex}
does not exist in the referred monitoring plan class "{monitoringPlanClassId}".
```

Legend

- `{userTechIdName}`: The name of the User Technical Identifier
- `{userTechIdIndex}`: The index of the User Technical Identifier
- `{monitoringPlanClassId}`: The ID of the referred monitoring plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the User Technical Identifier or change its name to a User Technical Identifier which exists in the monitoring plan class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1038 CONTRACT-110

Message

```
The contract item "{chargingContractItemId}" referring to the monitoring
plan class "{monitoringPlanClassId}" contains account assignments.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{monitoringPlanClassId}`: The ID of the referred monitoring plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the Account Assignments from the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1039 CONTRACT-111

Message

```
The status of activated monitoring plan "{monitoringPlanId}" is open.
Only released or obsolete monitoring plans can be activated.
```

Legend

- `{monitoringPlanId}`: The identifier of the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the status of activated monitoring plan to release or obsolete.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1040 CONTRACT-112

Message

```
The contract item "{chargingContractItemId}" referring to the monitoring
plan class "{monitoringPlanClassId}" contains redefinition parameters.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{monitoringPlanClassId}`: The ID of the referred monitoring plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the parameters from the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1041 CONTRACT-113

Message

```
The contract item "{chargingContractItemId}" referring to the monitoring
plan class "{monitoringPlanClassId}" contains pooled counters.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{monitoringPlanClassId}`: The ID of the referred monitoring plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the pooled counters from the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1042 CONTRACT-114

Message

```
Duplicate access for service "{serviceAccess}" and user identifier
"{identifierAccess}" is defined in provider contract "{chargingContractId}" in
contract item
"{firstChargingContractItemId}" linked to monitoring plan
"{firstMonitoringPlanId}" and
in contract item "{secondChargingContractItemId}" linked to monitoring plan
"{secondMonitoringPlanId}".
```

Legend

- `{serviceAccess}`: The service of the duplicate access
- `{identifierAccess}`: The identifier of the duplicate access
- `{chargingContractId}`: The identifier of the contract
- `{firstChargingContractItemId}`: The identifier of the first contract item
- `{firstMonitoringPlanId}`: The identifier of the first monitoring plan
- `{secondChargingContractItemId}`: The identifier of the second contract item

- `{secondMonitoringPlanId}`: The identifier of the second monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the contract configuration.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1043 CONTRACT-115

Message

```
The shared counter "{sharedCounterName}" at index {sharedCounterIndex}
does not exist in the referred monitoring plan class "{monitoringPlanClassId}".
```

Legend

- `{sharedCounterName}`: The name of the shared counter
- `{sharedCounterIndex}`: The index of the shared counter
- `{monitoringPlanClassId}`: The identifier of the referred monitoring plan class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the shared counter or change its name to a Counter which exists in the monitoring plan class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1044 CONTRACT-116

Message

```
At least one counter mapped in the monitoring plan class
"{monitoringPlanClassId}"
is not shared in the contract item "{chargingContractItemId}".
```

Legend

- `{monitoringPlanClassId}`: The ID of the referred monitoring plan class
- `{chargingContractItemId}`: The ID of the contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the missing shared counters from the monitoring plan class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1045 CONTRACT-117

Message

```
The spending status "{spendingStatusDescription}" referenced in the contract
item "{chargingContractItemId}" has been already referenced in the contract item
"{alreadyAssignedChargingContractItemId}".
```

Legend

- `{spendingStatusDescription}`: The identifier of the Spending Status Description
- `{chargingContractItemId}`: The ID of the contract item
- `{alreadyAssignedChargingContractItemId}`: The ID of the already assigned contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Refer to a spending status only once in a contract.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1046 CONTRACT-118

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
already refers to a plan class "{originalPlanClassId}" (type:
{originalPlanClassType}) and
cannot be changed to refer to the charge plan class "{newChargePlanClassId}" at
the same time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract
- `{originalPlanClassId}`: The ID of the plan class which is already referenced by the contract item
- `{originalPlanClassType}`: The type of the plan class which is already referenced by the contract item
- `{newChargePlanClassId}`: The other ID of a charge plan class to be referenced. This ID is specified in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1047 CONTRACT-119

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
already refers to a plan class "{originalPlanClassId}" (type:
{originalPlanClassType}) and cannot
be changed to refer to the refill plan class "{newRefillPlanClassId}" at the
same time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract
- `{originalPlanClassId}`: The ID of the plan class which is already referenced by the contract item
- `{originalPlanClassType}`: The type of the plan class which is already referenced by the contract item
- `{newRefillPlanClassId}`: The other ID of a refill plan class to be referenced. This ID is specified in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Verify your changes.

4.1048 CONTRACT-120

Message

```
The status of the contract item "{chargingContractItemId}" is suspended
with a suspension date/time {suspensionDate}. It is not possible to resume the
contract item
at the date/time {resumptionDate}. The given resumption date/time should be set
after this
suspension date/time.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{suspensionDate}`: The suspension date/time of the contract item in the provider contract
- `{resumptionDate}`: The resumption date/time in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify the resumption date/time after this suspension date/time.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1049 CONTRACT-121

Message

```
The contract item "{chargingContractItemId}" at index
{chargingContractItemIndex}
must not refer to a refill plan because the Prepaid Accounts Management feature
is disabled.
```

Legend

- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the contract item from the provider contract.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 5.0 SP 5 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1050 CONTRACT-122

Message

```
The parameter "{parameterName}" in the contract item "{chargingContractItemId}"
at
index {chargingContractItemIndex} cannot be modified.
```

Legend

- `{parameterName}`: The name of the parameter
- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemIndex}`: The index of the contract item within the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the visibility level of the parameter.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 2023 FPS 0 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1051 CONTRACTSTATE-1

Message

```
The shared counter "{sharedCounterName}" does not exist in the charging
contract "{chargingContractId}".
```

Legend

- `{sharedCounterName}`: The name of the shared counter to modify
- `{chargingContractId}`: The ID of the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the shared counter to an existing one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1052 CONTRACTSTATE-2

Message

```
The contract item "{chargingContractItemId}" specified in the contract
item state does not exist in the charging contract "{chargingContractId}".
```

Legend

- `{chargingContractItemId}`: The ID of the contract item specified in the operation request
- `{chargingContractId}`: The ID of the provider contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the identifier of the contract item to an existing contract item (customer master data).

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1053 CONTRACTSTATE-3

Message

```
The counter "{counterName}" does not exist in the charge plan "{chargePlanId}"
activated in the contract item "{chargingContractItemId}" specified in the
operation request.
```

Legend

- `{counterName}`: The name of the counter to modify and specified in the operation request
- `{chargePlanId}`: The ID of the charge plan retrieved from the specified contract item
- `{chargingContractItemId}`: The ID of the contract item specified in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the counter name to an existing one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1054 CONTRACTSTATE-4

Message

```
The specified charge activation "{chargeActivationId}" does not exist in the
contract item "{chargingContractItemId}" of the charging contract
"{chargingContractId}".
```

Legend

- `{chargeActivationId}`: The ID of the charge activation (or refill activation) specified in the operation request
- `{chargingContractItemId}`: The ID of the contract item specified in the operation request
- `{chargingContractId}`: The ID of the provider contract specified in the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the identifier of the charge activation to an existing one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1055 CONTRACTSTATE-5

Message

```
The specified counter "{counterName}" of the charge activation
"{chargeActivationId}"
in the contract item "{chargingContractItemId}" does not exist in the customized
charge
"{chargeComponentId}" or is always redefined.
```

Legend

- `{counterName}`: The name of the counter to modify
- `{chargeActivationId}`: The ID of the charge activation (or refill activation)
- `{chargingContractItemId}`: The ID of the contract item
- `{chargeComponentId}`: The ID of the charge component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the counter name to an existing one and check that the counter is not redefined.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1064 CONTRACTSTATE-14

Message

```
The specified LastActivationDate "{lastActivationDate}" in the charge activation
"{chargeActivationId}" of the contract item "{chargingContractItemId}" is
anterior to the
validity start date of the contract item
"{chargingContractItemValidityStartDate}".
```

Legend

- `{lastActivationDate}`: The LastActivationDate of the charge activation (or refill activation)
- `{chargeActivationId}`: The ID of the charge activation (or refill activation)
- `{chargingContractItemId}`: The ID of the contract item
- `{chargingContractItemValidityStartDate}`: The validity start date of the contract item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify a LastActivationDate posterior to the validity start date of the contract item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

```

Legend

- `{subscriberAccountId}`: The ID of the subscriber account which does not exist

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the subscriber account ID in the export request to an existing one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1067 CUSTOMERDATA-3

Message

```
The root charging contract with the ID "{rootChargingContractId}" does not
exist in the SAP CC system.
```

Legend

- `{rootChargingContractId}`: The ID of the root charging contract which does not exist

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the root charging contract ID in the export request to an existing one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1068 CUSTOMERDATA-4

Message

```
The contracts to be exported do not belong to the same subscriber account.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

To export several contracts at the same time, choose contracts having the same subscriber account.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1084 CUSTOMERDATA-20

Message

```
The linked charging contract "{linkedChargingContractId}" to be imported
references the root charging contract "{rootChargingContractId}" which does not
exist in
the SAP CC destination system.
```

Legend

- `{linkedChargingContractId}`: The ID of the linked charging contract
- `{rootChargingContractId}`: The ID of the root charging contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the linked charging contract from the import request or import the root charging contract first.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1085 CUSTOMERDATA-21

Message

```
The linked charging contract "{linkedChargingContractId}" to be imported
reference the root charging contract "{rootChargingContractId}" having a
different subscriber
account in the SAP CC destination system.
```

Legend

- `{linkedChargingContractId}`: The ID of the linked charging contract
- `{rootChargingContractId}`: The ID of the root charging contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the linked charging contract from the import request and check that all the objects to be imported belong to the same subscriber account.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1101 CUSTOMERMANAGEMENTAREA-7

Message

```
The name of the CRM JCo destination in the customer management area at index
{customerManagementAreaIndex} is empty.The name of the CRM JCo destination in
the customer
management area at index {customerManagementAreaIndex} is empty.
```

Legend

- `{customerManagementAreaIndex}`: The index of the customer management area in the customer management area list

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the name of the CRM JCo destination in the customer management area.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP05 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1102 CUSTOMERMANAGEMENTAREA-8

Message

```
The name "{crmJcoDestinationName}" of the CRM JCo destination in the definition
at index {customerManagementAreaDefinitionIndex} matches no existing CRM JCo
destination.
```

Legend

- `{crmJcoDestinationName}`: The name of the CRM JCo destination in the customer management area
- `{customerManagementAreaDefinitionIndex}`: The index of the customer management area in the customer management area list

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set an existing CRM JCo destination name to the customer management area.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1104 CUSTOMERMANAGEMENTAREA-10

Message

```
The name "{defaultCustomerManagementAreaName}" of the default customer
management area matches no customer management area name in the customer
management area list.
```

Legend

- `{defaultCustomerManagementAreaName}`: The default customer management area name

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set a valid default customer management area or change the name of a customer management area to the default customer management area name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1106 CUSTOMERMANAGEMENTAREA-12

Message

```
The customer management area "{customerManagementAreaName}" cannot be
removed because it is still used by at least one subscriber account.
```

Legend

- `{customerManagementAreaName}`: The still used customer management area name

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete all the subscriber accounts that use this customer management area.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

```
The type of the Additional Information "{additionalInformationName}" at index
{additionalInformationIndex} is missing or unknown (supported types are string,
number, date).
```

Legend

- `{additionalInformationName}`: The name of the Additional Information
- `{additionalInformationIndex}`: The position index of the Additional Information item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a type to the Additional Information item or change it to a supported one: string, number, or date.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 5.0 SP 0 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1136 HCI-22

Message

```
The object "{objectID}" of type "{objectType}" is invalid.
```

Legend

- `{objectID}`: The ID of the object
- `{objectType}`: The type of the object

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

First correct the object according to the other error messages, then perform the import operation again.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1144 MACROCOMPONENT-1

Message

```
The logic component defines the mapping between a mapping table ID property
"{componentMappedPropertyName}" and a pricing macro "{pricingMacroId}" input
property
"{pricingMacroInputPropertyName}" that is not a mapping table ID property.
```

Legend

- `{componentMappedPropertyName}`: The name of the mapped property
- `{pricingMacroId}`: The ID of the pricing macro
- `{pricingMacroInputPropertyName}`: The name of the pricing macro input property

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the mapping to a standard string or change the input property of the pricing macro to a mapping table ID property.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1145 MACROCOMPONENT-2

Message

```
The component defines a mapping between a mapping table ID property
"{componentMappedPropertyName}"
and pricing macro "{pricingMacroId}" input property
"{pricingMacroInputPropertyName}" that
do not define the same mapping table class IDs:
"{componentMappedPropertyMappingTableClassId}"
/"{pricingMacroInputPropertyMappingTableClassId}".
```

Legend

- `{componentMappedPropertyName}`: The name of the mapped property
- `{pricingMacroId}`: The ID of the pricing macro
- `{pricingMacroInputPropertyName}`: The name of the pricing macro input property
- `{componentMappedPropertyMappingTableClassId}`: TThe mapping table class ID the pricing macro input property
- `{pricingMacroInputPropertyMappingTableClassId}`: The mapping table class ID of the pricing macro input property

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Modify the property mapping table class ID or change the pricing macro input property to the correct mapping table class ID.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1152 MACROCOMPONENT-9

Message

```
Component "{macroComponent}" calls pricing macro "{pricingMacroId}"
with {actualParameterCount} parameter(s) instead of {expectedParameterCount}.
```

Legend

- `{macroComponent}`: The name of the macro component
- `{pricingMacroId}`: The ID of the pricing macro
- `{actualParameterCount}`: The number of parameters actually specified
- `{expectedParameterCount}`: The number of parameters expected by the macro

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

As of SP 1 patch level 3 for release 5.0, the SAP CC Core Server system performs stricter validations on the SAP CC logic components, each time you modify, import, or transport data objects that include some logic.

This error code is part of these supplementary validations. See SAP Note 2618936 for the latest information.

Next Actions and Steps (Troubleshooting)

Modify the component to pass in the right number of parameters to the macro.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Additional Information

To facilitate your troubleshooting and provide you with more user guidance, see:

- SAP Note 2618936
- SAP Note 2618936
- PRICING_LOGIC_STRICT_VALIDATION_ENABLED system parameter

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 5.0 SP 1 Patch Level 3 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1153 MACROCOMPONENT-10

Message

```
Pricing macro "{pricingMacroId}" is called by component "{macroComponentName}"
but is not defined.
```

Legend

- `{pricingMacroId}`: The ID of the pricing macro
- `{macroComponentName}`: The name of the macro component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Modify the component to call a known macro or create the macro first.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1154 MACROCOMPONENT-11

Message

```
Component "{macroComponent}" calls pricing macro "{pricingMacroId}"
                  with {actualParameterCount} output parameter(s) instead of
{expectedParameterCount}.
```

Legend

- `{macroComponent}`: The name of the macro component
- `{pricingMacroId}`: The ID of the pricing macro
- `{actualParameterCount}`: The number of output parameters actually specified
- `{expectedParameterCount}`: The number of parameters generated by the macro

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

As of SP 1 patch level 3 for release 5.0, the SAP CC Core Server system performs stricter validations on the SAP CC logic components, each time you modify, import, or transport data objects that include some logic.

This error code is part of these supplementary validations. See SAP Note 2618936 for the latest information.

Next Actions and Steps (Troubleshooting)

Modify the component to generate the right number of parameters by the macro.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 2022 FPS 0 Patch Level 0 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1155 MACROCOMPONENT-12

Message

```
Pricing macro "{pricingMacroId}" called by component "{macroComponent}" has the
flag
ManagedByCockpit set to "{isPricingMacroCockpitCompatible}" which is not
compatible.
```

Legend

- `{pricingMacroId}`: The ID of the pricing macro
- `{macroComponent}`: The name of the macro component
- `{isPricingMacroCockpitCompatible}`: The value of the attribute ManagedByCockpit in the Pricing Macro

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use the correct user interface.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> See also Deprecated and Revoked Error Codes [page 58].

4.1158 MAPPINGTABLE-3

Message

```
The owner of the mapping table class "{mappingTableClassId}" is missing.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

When configuring a pricing element in a pricing catalog, you set up the **owner information** with the owner information that is already set for the catalog that includes your element (data object).

The service provider company that provides some marketable end-customer services with SAP CC owns such a pricing catalog to monetize the service usage and consumption.

In SAP Convergent Charging, the **catalog owner** is a textual reference to:

- The "contracting" service provider (such as the company name) that want to monetize one or multiple end-customer services

- An end-customer service (such as the service name or a comprehensive abbreviation)
- A bundle of end-customer services (such as the name of this bundle) that can be priced by using some common pricing elements from a unique catalog

The exact meaning depends on your implementation requirements.

> → Tip
>
> When modeling and designing the catalog owner information, use a **combination** of:
>
> - The **company name** of the service provider that you represent
> - The **name of the marketable end-customer service** or the name of a service bundle that must be priced by using the corresponding pricing catalog
>
> For example, configure your system with: *GAFA*, *GAFA Digital Services*, or *GAFA Duo Services*.
>
> Use the same information to rename a pricing catalog and facilitate the maintenance and troubleshooting.
>
> In a training system, SAP CC users can set up the catalog owners by using their user ID or lastname for example.

The SAP CC system uses this technical information to control the master data consistency. A pricing catalog and all its pricing elements must have the same owner information.

> ⓘ Note
>
> The catalog owner is not the SAP CC user who configures a pricing catalog and its elements.

Next Actions and Steps (Troubleshooting)

Add an owner to the mapping table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1161 MAPPINGTABLE-6 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Replaced by MAPPINGTABLE-232 [page 2199].

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The mapping table class "{mappingTableClassId}" must have less than four
input columns.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete an input column to have 4 input columns maximum.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1164 MAPPINGTABLE-9

Message

```
The name of the input column at index {inColumnIndex} is missing.
```

Legend

- `{inColumnIndex}`: The index of the input column within the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

This specific error code defines an error cause. It results from a validation failure. Refer to the MAPPINGTABLE-15 [page 2116] error code.

Next Actions and Steps (Troubleshooting)

Add a name to the input column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Additional Information

SAP Convergent Charging uses this error code to identify an error cause. It refers to the validation error MAPPINGTABLE-15 [page 2116]

View **similar causes**:

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1167 MAPPINGTABLE-12

Message

```
The name of the output column at index {outColumnIndex} is missing.
```

Legend

- `{inColumnIndex}`: The index of the output column within the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

This specific error code defines an error cause. It results from a validation failure. Refer to the MAPPINGTABLE-15 [page 2116] error code.

Next Actions and Steps (Troubleshooting)

Add a name to the output column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Additional Information

SAP Convergent Charging uses this error code to identify an error cause. It refers to the validation error MAPPINGTABLE-15 [page 2116]

4.1170 MAPPINGTABLE-16

Message

```
Impossible to create the mapping table class because its ID
{mappingTableClassId}
already exists.
```

Legend

- `{mappingTableClassId}`: The specified ID that needs to be changed because it already exists

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

In the SAP CC Core Server system, a data object of same type is already available and has exactly the same identifier (ID) or identification name.

The data may belong to another pricing catalog.

Next Actions and Steps (Troubleshooting)

Change the identifier of the mapping table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Additional Information

- MACA database table
- com/highdeal/hci/InvalidCreationErrorException class
- com/highdeal/mappingtable/hci/MappingTableClassModel class

Legend

- `{mappingTableClassId}`: The ID of the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the mapping table class identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1184 MAPPINGTABLE-107

Message

```
The ID of the mapping table to delete is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the mapping table identifier to the delete operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1188 MAPPINGTABLE-111

Message

```
The subscriber account ID of the subscriber mapping table
"{subscriberMappingTableID}"
is missing.
```

Legend

- `{subscriberMappingTableID}`: The ID of the subscriber mapping table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a subscriber account identifier to the subscriber mapping table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1190 MAPPINGTABLE-113

Message

```
The subscriber account "{subscriberAccountId}", with service provider
"{subscriberAccountServiceProviderName}", does not exist. These identifiers are
provided by
the subscriber mapping table "{subscriberMappingTableId}".
```

Legend

- `{subscriberAccountId}`: The ID of the subscriber account
- `{subscriberAccountServiceProviderName}`: The name of the service provider
- `{subscriberMappingTableId}`: The ID of the subscriber mapping table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the identifier of the subscriber account and/or the service provider.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1191 MAPPINGTABLE-114

Message

```
Unable to create a subscriber mapping table with an ID already used by
an existing mapping table "{mappingTableId}".
```

Legend

- `{mappingTableId}`: The ID of the mapping table that already exists

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the subscriber mapping table identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1192 MAPPINGTABLE-115

Message

```
Unable to create a mapping table with the same ID "{subscriberMappingTableId}"
of a subscriber mapping table that already exists.
```

Legend

- `{subscriberMappingTableId}`: The ID of the subscriber mapping table that already exists

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the mapping table identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1193 MAPPINGTABLE-116

Message

```
The owner "{owner}" of the mapping table class used by the subscriber
mapping table does not match the subscriber account service provider name
"{subscriberAccountServiceProviderName}" of the subscriber mapping table.
```

Legend

- `{owner}`: The owner of the mapping table class
- `{subscriberAccountServiceProviderName}`: The name of the service provider

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the subscriber mapping table subscriber account service provider name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Legend

- `{columnName}`: The name of the column
- `{rowId}`: The ID of the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a type to the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1202 MAPPINGTABLE-207

Message

```
The column "{columnName}" of the row "{rowId}" has no string value.
```

Legend

- `{columnName}`: The name of the column
- `{rowId}`: The ID of the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a string value to the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1203 MAPPINGTABLE-208

Message

```
The column "{columnName}" of the row "{rowId}" has no currency value.
```

Legend

- `{columnName}`: The name of the column
- `{rowId}`: The ID of the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a currency value to the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1204 MAPPINGTABLE-209

Message

```
The column "{columnName}" of the row "{rowId}" has no number value.
```

Legend

- `{columnName}`: The name of the column
- `{rowId}`: The ID of the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a number value to the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1205 MAPPINGTABLE-210

Message

```
The number of columns for the row "{rowId}" does not match with the number
of columns specified in the related mapping table class.
```

Legend

- `{rowId}`: The ID of the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Modify the row to have the same number of columns than the mapping table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1206 MAPPINGTABLE-211

Message

```
The column with name "{columnName}" in the row "{rowId}" is missing.
```

Legend

- `{columnName}`: The name of the column
- `{rowId}`: The ID of the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the column in the row.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1207 MAPPINGTABLE-212

Message

```
The column of the row "{rowId}" at index {columnIndex} has no type.
```

Legend

- `{rowId}`: The ID of the row
- `{columnIndex}`: The position of the column in the row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a type to the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1208 MAPPINGTABLE-213

Message

```
The type of the column in the row "{rowId}" does not match with the type
of the input column of the mapping table class "{inColumnName}".
```

Legend

- `{rowId}`: The ID of the row
- `{inColumnName}`: The name of the input column

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the type of the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1209 MAPPINGTABLE-215

Message

```
The type of the column in the row "{rowId}" does not match with the type
of the output column "{outColumnName}" of the mapping table class.
```

Legend

- `{rowId}`: The ID of the row
- `{outColumnName}`: The name of the output column

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the type of the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1210 MAPPINGTABLE-217 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The list of rows is empty.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add at least one row in the list of the operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to 3.0 SP04.. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1211 MAPPINGTABLE-218

Message

```
The mapping table ID is null or empty.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the identifier of the mapping table that owns the rows.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

>
> See also Deprecated and Revoked Error Codes [page 58].

4.1219 MAPPINGTABLE-227

Message

```
The mapping table row "{mappingTableRowId}" does not exist.
```

Legend

- `{mappingTableRowId}`: The ID of the mapping table row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the identifier of the row.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1220 MAPPINGTABLE-228

Message

```
The start date of mapping table row "{mappingTableRowId}" is after its end date.
```

Legend

- `{mappingTableRowId}`: The ID of the mapping table row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the dates of the row.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1221 MAPPINGTABLE-229

Message

```
The mapping table class "{mappingTableClassId}" cannot be deleted because
it is referenced by at least one charge or refill logic object or pricing macro
or allowance
logic.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete the charge(s) and/or refill logic object(s) and/or pricing macro(s) referencing the mapping table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1222 MAPPINGTABLE-230

Message

```
The mapping table "{mappingTableId}" cannot be deleted because it is referenced
by at least one of the following components:
charge component, refill logic, allowance logic, charge plan, refill plan,
pricing macro, or provider contract.
```

Legend

- `{mappingTableId}`: The ID of the mapping table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete the charge(s), refill logic object(s), allowance logic object(s), charge plan(s), refill plan(s), pricing macro(s) and/or provider contract(s) referencing the mapping table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1223 MAPPINGTABLE-231

Message

```
The new row "{rowId1}" is duplicated with the existing row "{rowId2}".
```

Legend

- `{rowId1}`: The ID of new row
- `{rowId2}`: The ID of existing row

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the input values or the validity dates of the row.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1224 MAPPINGTABLE-232

Message

```
The mapping table class "{mappingTableClassId}" cannot have more than 20
input columns.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Split the existing mapping table class into several mapping table classes to respect the above limitation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1237 MAPPINGTABLE-245

Message

```
The mapping table class to modify is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a mapping table class to the modify operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

>
> See also Deprecated and Revoked Error Codes [page 58].

4.1238 MAPPINGTABLE-246

Message

```
Impossible to modify the mapping table class because its ID
{mappingTableClassId}
does not exist.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class that needs to be changed

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, change the ID of the mapping table class or determine why the mapping table class does not exist in the pricing catalog (in master data).

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1239 MAPPINGTABLE-247

Message

```
Impossible to modify the mapping table class "{mappingTableClassId}" because
it is still used by a mapping table. Only restricted modifications are possible.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class to change

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete all the mapping tables that are based on and refer to this mapping table class. See the other error messages about the detailed reason.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1240 MAPPINGTABLE-248

Message

```
Impossible to modify the mapping table class "{mappingTableClassId}" because
it is referenced by at least one charge, refill logic object, pricing macro, or
allowance logic
object. Only restricted modifications are possible.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class to change

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete all the charges, refill logic objects, pricing macros, or allowance logic objects that refer to this mapping table class. See the other error messages about the detailed reason.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1241 MAPPINGTABLE-249

Message

```
Impossible to modify the mapping table class "{mappingTableClassId}" because
it is still used by a subscriber mapping table. Only restricted modifications
are possible.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class to change

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete all the subscriber mapping tables that are based on and refer to this mapping table class. See the other error messages about the detailed reason.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1242 MAPPINGTABLE-250

Message

```
Impossible to modify the mapping table class "{mappingTableClassId}" because
the specified owner {specifiedOwner} does not correspond to the owner
{realOwner} already
configured in the existing mapping table class.
```

Legend

- `{mappingTableClassId}`: The ID of the mapping table class to change
- `{specifiedOwner}`: The owner specified in the operation request
- `{realOwner}`: The owner already declared in the existing mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, change the owner to the owner of the mapping table class or create a new mapping table class for the specified owner.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1243 MAPPINGTABLE-251

Message

```
In the current context of use, you cannot modify the number of input columns
{specifiedInColumns}. It must equal the number of input columns {realInColumns}
```

```
already
configured in the existing mapping table class.
```

Legend

- `{specifiedInColumns}`: The specified number of input columns in the operation request
- `{realInColumns}`: The number of input columns existing in the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, correct the number of input columns or create a new mapping table class for the specified number of input columns. See the other error messages to determine your use context.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1244 MAPPINGTABLE-252

Message

```
In the current context of use, you cannot replace the name of the input column
"{existingInColumnName}" at index {inColumnIndex} by "{operationInColumnName}".
```

Legend

- `{existingInColumnName}`: The name of the input column already defined in the mapping table class
- `{inColumnIndex}`: The index of the input column in the mapping table class
- `{operationInColumnName}`: The name of the input column within the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, correct the name of the input column or create a new mapping table class with an input column having the specified name. See the other error messages to determine your use context.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1245 MAPPINGTABLE-253

Message

```
In the current context of use, you cannot modify the type of the input column
at index {specifiedInColumnIndex}. It must equal the type of the input column at
index
{realInColumnIndex} that is already configured in the mapping table class.
```

Legend

- `{specifiedInColumnIndex}`: The index of the input column within the operation request
- `{realInColumnIndex}`: The index of the input column within the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, correct the type of the input column or create a new mapping table class for the specified input column type. See the other error messages to determine your use context.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

This error code is valid from SAP CC version number 5.0 SP 3 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1246 MAPPINGTABLE-254

Message

```
In the current context of use, you cannot modify the number of output columns
{specifiedOutColumns}. It must equal the number of output columns
{realOutColumns} already
configured in the existing mapping table class.
```

Legend

- `{specifiedOutColumns}`: The specified number of output columns in the operation request
- `{realOutColumns}`: The number of output columns existing in the mapping table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, correct the number of output columns or create a new mapping table class for the specified number of output columns. See the other error messages to determine your use context.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1247 MAPPINGTABLE-255

Message

```
In the current context of use, you cannot replace the name of the output
                    column "{existingOutColumnName}" at index {outColumnIndex}
by "{operationOutColumnName}".
```

Legend

- `{existingOutColumnName}`: The name of the output column in the mapping table class
- `{outColumnIndex}`: The index of the output column in the mapping table class
- `{operationOutColumnName}`: The name of the output column within the operation request

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the operation request, correct the name of the output column or create a new mapping table class with an output column having the specified name. See the other error messages to determine your use context.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1249 MAPPINGTABLE-257

Message

```
You cannot modify the agreement ID "{operationAgreementId}". The agreement
ID of the mapping table is "{mappingTableAgreementId}".
```

Legend

- `{operationAgreementId}`: The agreement ID in the operation
- `{mappingTableAgreementId}`: The agreement ID of the mapping table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the agreement ID to "{1}" in the operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1253 MAPPINGTABLE-262

Message

```
Impossible to import the mapping table rows because the CSV contains two rows
with identifier equal to "{duplicatedIdentifier}".
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Legend

- `{duplicatedIdentifier}`: The identifier of the duplicated mapping table row

Related Error Code: `262`

Related Technical Module: `MAPPINGTABLE`

`MAPPINGTABLE [page 73]`

Next Actions and Steps (Troubleshooting)

1. Check the CSV content.
2. Check why two rows have the same row identifier.
   Several reasons are possible: the row is duplicated, one row identifier must be different.
3. Change the data to import.
4. Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

Questions and Answers for SAP Convergent Charging

> → Recommendation
>
> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 2023 FPS 2 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1254 MAPPINGTABLE-263

Message

```
Cannot parse the token "{csvFieldIndex}" of the mapping table row
"{csvRowLine}". {errorMessageDetails}
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Legend

- `{csvFieldIndex}`: The index of the CSV field in error
- `{csvRowLine}`: The number of the CSV line in error
- `{errorMessageDetails}`: The message detailing the error

Related Error Code: `263`

Related Technical Module: `MAPPINGTABLE`

`MAPPINGTABLE [page 73]`

Next Actions and Steps (Troubleshooting)

1. Carefully read the part of the message that details the error. This information is added by the system to the error message for troubleshooting purpose.
2. Check the CSV content.
3. Check the line indicated in the error message.
   In this line, check the data at the position indicated.
4. Change the CSV content.
5. Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

RANGETABLE-267 [page 2571]

4.1255 MAPPINGTABLE-264

Message

```
The comment line mark must be a hash, a dollar, or empty.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Related Error Code: `264`

Related Technical Module: `MAPPINGTABLE`

`MAPPINGTABLE [page 73]`

Next Actions and Steps (Troubleshooting)

1. Check the settings of the operation request. Some information is required and was not specified.
   When you work with a comment line at the beginning, specify a hash ('#') or a dollar (`'$'`) character as the comment line mark.
2. Change the API call or SOAP Web Services operation consumption.
3. Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 2023 FPS 2 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

See Also

RANGETABLE-259 [page 2557]

4.1256 MAPPINGTABLE-265

Message

```
The value of the element "csvImportMode" must be "Merge" or "ClearAndReplace".
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Related Error Code: `265`

Related Technical Module: `MAPPINGTABLE`

`MAPPINGTABLE [page 73]`

Next Actions and Steps (Troubleshooting)

1. In the operation request, check the option that was specified as a setting of the operation request.
2. Change the value of the XML element `csvImportMode`:
   - Use `<csvImportMode>Merge</csvImportMode>` to merge alreay-existing data with the imported data.
   - Use `<csvImportMode>ClearAndReplace</csvImportMode>` to erase alreay-existing data and replace it with the imported data.
3. Verify your changes.

Check the technical specifications. For example, refer to the SAP CC 2023 Web Services Documentation (SOAP).

> ### Example
>
> For example, as of version 2023 FPS 2 and the version 4 of the SOAP Web Services of SAP CC, the WS operation `mappingTableDataCSVImport` is available and provides you with two processing modes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1262 MAPPINGTABLECOMPONENT-5

Message

```
The mapping table ID defined by a charge component parameter named
"{mappingTableIdPropertyName}" does not exist.
```

Legend

- `{mappingTableIdPropertyName}`: The name of the mapping table ID parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a parameter in the charge component or define a mapping table ID.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1263 MAPPINGTABLECOMPONENT-6

Message

```
The mapping table "{mappingTableId}" does not exist.
```

Legend

- `{mappingTableId}`: The ID of the mapping table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the identifier of the mapping table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1264 MAPPINGTABLECOMPONENT-7

Message

```
The mapping table class "{mappingTableClassIdFromParameter}" referenced in
the parameter "{parameterName}" does not correspond to the mapping table class
"{mappingTableClassIdFromRateComponent}" defined in the rate component.
```

Legend

- `{mappingTableClassIdFromParameter}`: The ID of the mapping table class from the parameter
- `{parameterName}`: The name of the parameter
- `{mappingTableClassIdFromRateComponent}`: The ID of the mapping table class from the rate component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set up the same mapping table class in the parameter and in the component.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1265 MAPPINGTABLECOMPONENT-8

Message

```
The mapping table class "{mappingTableClassIdFromParameter}" from range table
"{parameterName}" does not correspond to the mapping table class
"{mappingTableClassIdFromRateComponent}" defined in the rate component.
```

Legend

- `{mappingTableClassIdFromParameter}`: The ID of the mapping table class from the parameter
- `{parameterName}`: The name of the parameter
- `{mappingTableClassIdFromRateComponent}`: The ID of the mapping table class from the rate component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set up the same mapping table class in the parameter and in the component.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.1 SP 2 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1268 MAPPINGTABLECOMPONENT-11

Message

```
Component "{component}" invokes a mapping table of class "{mappingTableClass}"
with {actualKeyCount} keys instead of {expectedKeyCount}.
```

Legend

- `{component}`: The name of the mapping table comparator
- `{mappingTableClass}`: The name of the referenced mapping table class
- `{actualKeyCount}`: The number of keys expected by the mapping table
- `{expectedKeyCount}`: The number of keys specified by the component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Detailed Information

As of SP 1 patch level 3 for release 5.0, the SAP CC Core Server system performs stricter validations on the SAP CC logic components, each time you modify, import, or transport data objects that include some logic.

This error code is part of these supplementary validations. See SAP Note 2618936 for the latest information.

Next Actions and Steps (Troubleshooting)

Match the number of input columns of the mapping table class and the number of key(s) provided by the component.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Additional Information

To facilitate your troubleshooting and provide you with more user guidance, see:

4.1269 MAPPINGTABLECOMPONENT-12

Message

```
Component "{component}" references a mapping table of class
"{mappingTableClass}"
and expects {mappedValueCount} output value(s) instead of {generatedValueCount}.
```

Legend

- `{component}`: The name of the mapping table comparator
- `{mappingTableClass}`: The name of the referenced mapping table class
- `{mappedValueCount}`: The number of output values generated by the mapping table
- `{generatedValueCount}`: The number of output values expected by the component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Detailed Information

As of SP 1 patch level 3 for release 5.0, the SAP CC Core Server system performs stricter validations on the SAP CC logic components, each time you modify, import, or transport data objects that include some logic.

This error code is part of these supplementary validations. See SAP Note 2618936 for the latest information.

Next Actions and Steps (Troubleshooting)

Match the number of outputs columns of the mapping table and the number of values expected by the component.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Additional Information

To facilitate your troubleshooting and provide you with more user guidance, see:

- SAP Note 2618936
- SAP Note 2580200
- PRICING_LOGIC_STRICT_VALIDATION_ENABLED system parameter

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 5.0 SP 1 Patch Level 3 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1270 MAPPINGTABLECOMPONENT-13

Message

```
The component cannot reference the mapping table "{mappingTable}" because
this mapping table has an agreement ID.
```

Legend

- `{mappingTable}`: The name of the mapping table referenced by the component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Select a mapping table without agreement ID.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1271 MONITORINGPLAN-1

Message

```
The ID of the monitoring plan is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add an ID to the monitoring plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1272 MONITORINGPLAN-2

Message

```
The owner of the monitoring plan "{monitoringPlanId}" is missing.
```

Legend

- `{monitoringPlanId}`: The ID of the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add an owner to the monitoring plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1275 MONITORINGPLAN-5

Message

```
The monitoring plan "{monitoringPlanId}" must at least declare one spending
status mapping.
```

Legend

- `{monitoringPlanId}`: The ID of the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add at least one spending status mapping that configures the generation of a spending status.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1286 MONITORINGPLAN-16

Message

```
The monitoring plan is missing in the modify operation.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify a monitoring plan to the modify operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1287 MONITORINGPLAN-17

Message

```
The monitoring plan "{monitoringPlanId}" does not exist.
```

Legend

- `{monitoringPlanId}`: The ID of the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify another monitoring plan to the modify operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1288 MONITORINGPLAN-18

Message

```
The mandatory filter is missing in the search operation.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify a filter in the search operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1289 MONITORINGPLAN-19

Message

```
An unknown error occurred during the execution of the monitoring plan search
operation: {reasonInformation}
```

Legend

- `{reasonInformation}`: The additional information describing the error that occurred

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the reason information recorded in your error message. The reason is based on the Java Technology. It details the exception raised in the connected SAP CC system.
Typical reasons are: Invalid search filter, Back-end database failure.

Refer to the Java/XML API Reference (Core Library) documentation for more information about the com.highdeal.filter.hci.InvalidSearchException.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1290 MONITORINGPLAN-20

Message

```
The ID of the monitoring plan is missing in the delete operation.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify the relevant monitoring plan ID in the delete operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1291 MONITORINGPLAN-21

Message

```
Cannot delete the monitoring plan: The monitoring plan "{monitoringPlanId}"
does not exist.
```

Legend

- `{monitoringPlanId}`: The ID of the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Specify another ID of monitoring plan to the delete operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1292 MONITORINGPLAN-22

Message

```
Error while deleting the monitoring plan "{monitoringPlanId}". The monitoring
plan is still activated in one provider contract.
```

Legend

- `{monitoringPlanId}`: The ID of the monitoring plan that needs to be deleted

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

First delete all contract items referencing the monitoring plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1293 MONITORINGPLAN-23

Message

```
The monitoring plan "{monitoringPlanId}" cannot be modified because the
specified
owner {specifiedOwner} does not correspond to the owner {realOwner} existing in
the monitoring
plan.
```

Legend

- `{monitoringPlanId}`: The ID of the monitoring plan
- `{specifiedOwner}`: The specified owner in the operation
- `{realOwner}`: The owner existing in the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the owner to the owner of the monitoring plan or create a new monitoring plan for the specified owner.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP04 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1304 MONITORINGPLAN-34

Message

```
The string value of the additional information "{additionalInformationName}"
cannot be modified because the monitoring plan "{monitoringPlanId}" has been
released or is
obsolete.
```

Legend

- `{additionalInformationName}`: The name of the Additional Information
- `{monitoringPlanId}`: The ID of the monitoring plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Create a new monitoring plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1320 MONITORINGPLAN-50

Message

```
The Parameter at index {parameterIndex} is empty.
```

Legend

- `{parameterIndex}`: The index of the Parameter within the Monitoring Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Replace it by a valid Parameter or remove it.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1322 MONITORINGPLAN-52

Message

```
The name "{parameterName}" of the Parameter at index {secondIndex} is already
used by the Parameter at index {firstIndex}.
```

Legend

- `{parameterIndex}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name within Parameters
- `{firstIndex}`: The index of the first occurrence of the name within Parameters

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1335 OPERATIONALSTATUS-1

Message

```
The process cannot access the contract with the ID "{chargingContractId}"
because
the operational status of the contract is not set to active.
```

Legend

- `{chargingContractId}`: The ID of the contract whose the operational status is locked or closed

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

If the contract is locked, set its operational status to active and launch the process again.
If the contract is closed, the process cannot access it.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP08 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1338 OPERATIONALSTATUS-4

Message

```
The operational status of the contract cannot be modified because the
contract is a linked charging contract.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Modify the operational status of the root charging contract corresponding to this linked charging contract.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1340 OPERATIONALSTATUS-6

Message

```
The operational status of the contract cannot be changed because it is used
for a rerating or a recharging session.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Wait until the rerating session is completed.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1341 OPERATIONALSTATUS-7

Message

```
The contract cannot be closed because its operational status is set to active.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the operational status of the contract to locked first, and then set it to closed.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1344 OPERATIONALSTATUS-10

Message

```
The charging contract with the ID "{chargingContractId}" cannot be deleted
because its operational status is set to locked.
```

Legend

- `{chargingContractId}`: The ID of the contract whose root contract is locked

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the operational status of the corresponding root charging contract to active or closed first, and then delete the charging contract.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1356 RANGETABLE-3

Message

```
The description of the range table class is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a description to the range table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1357 RANGETABLE-4

Message

```
The range table class must declare the range upper bound.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the range upper bound.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1358 RANGETABLE-5

Message

```
The range table class must at least declare one output column.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add at least one output column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1359 RANGETABLE-6

Message

```
The range table class must have less than {outColumnMax} output columns.
```

Legend

- `{outColumnMax}`: The maximum of output column allowed in the range table class definition

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete output columns to have a count of output column underneath the maximum.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1374 RANGETABLE-21

Message

```
Impossible to remove the range table class "{rangeTableClassId}" because
it is still used by a range table.
```

Legend

- `{rangeTableClassId}`: The ID of the range table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete all the subscriber range tables and all the range tables that relate to this range table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1375 RANGETABLE-22

Message

```
Impossible to modify the range table class because the specified range upper
bound value "{specifiedRangeUpperBound}" does not correspond to the range upper
bound value
"{realRangeUpperBound}" existing in the range table class.
```

Legend

- `{specifiedRangeUpperBound}`: The specified range upper bound value in the operation
- `{realRangeUpperBound}`: The range upper bound value existing in the range table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the range upper bound value to the range upper bound value of the range table class or create a new range table class for the specified range upper bound value.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1376 RANGETABLE-23

Message

```
Impossible to modify the range table class because the number of output
column(s) {specifiedOutColumns} does not correspond to the number of output
column(s) {realOutColumns}
existing in the range table class.
```

Legend

- `{specifiedOutColumns}`: The specified number of output column(s) in the operation
- `{realOutColumns}`: The number of output column(s) existing in the range table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the number of output column(s) to the number of output column(s) of the range table class or create a new range table class for the specified output column(s).

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1391 RANGETABLE-121

Message

```
The revision for range table "{rangeTableId}" is not valid.
```

Legend

- `{rangeTableId}`: The ID of the range table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a valid range table revision in the create operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1392 RANGETABLE-122

Message

```
The range table ID is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the range table identifier in the range table revision.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1393 RANGETABLE-123

Message

```
The range table rows or range sets are missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add at least one row or range set to the range table revision.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1395 RANGETABLE-128

Message

```
The range table "{rangeTableId}" already exists in the SAP CC system.
The creation with this ID is not possible.
```

Legend

- `{rangeTableId}`: The ID of the already existing range table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

In the range table revision of the create operation, set a new range table ID.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1399 RANGETABLE-132

Message

```
The rows or the ranges at indexes #{firstIndexWoUpperBound} and
#{secondIndexWoUpperBound}
have no upper bound.
```

Legend

- `{firstIndexWoUpperBound}`: The index of the first row or range without upper bound
- `{secondIndexWoUpperBound}`: The index of the second row or range without upper bound

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set an upper bound in one of the rows or the ranges.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1400 RANGETABLE-133

Message

```
The rows or the ranges at indexes #{firstIndexSameUpperBound} and
#{secondIndexSameUpperBound} must not have the same upper bound "{upperBound}".
```

Legend

- `{firstIndexSameUpperBound}`: The index of the first row or range with the same upper bound
- `{secondIndexSameUpperBound}`: The index of the second row or range with the same upper bound
- `{upperBound}`: The upper bound common to both

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the upper bound for one of the rows or the ranges.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1409 RANGETABLE-142

Message

```
The number value of the column is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a number value to the column.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1427 RANGETABLE-161

Message

```
The service provider name "{subscriberAccountServiceProviderName}" is not valid.
It should be "{initialSubscriberAccountServiceProviderName}".
```

Legend

- `{subscriberAccountServiceProviderName}`: The service provider name set in the current subscriber range table revision
- `{initialSubscriberAccountServiceProviderName}`: The service provider name previously set in the initial subscriber range table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the service provider name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1428 RANGETABLE-162

Message

```
The range table row or the range #{unboundedIndex} has no upper bound.
The range table class requires a bounded last range.
```

Legend

- `{unboundedIndex}`: The index of the row or range without upper bound

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add an upper bound to the row or to the range.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1429 RANGETABLE-163

Message

```
The range table is not unbounded. The range table class requires unbounded
only tables.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set a row or a range without upper bound value.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1430 RANGETABLE-229

Message

```
The range table class "{rangeTableClassId}" cannot be deleted because it is
referenced by at least one charge or refill logic, an allowance logic object or
pricing macro.
```

Legend

- `{rangeTableClassId}`: The ID of the range table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete the charge(s) and/or refill logic object(s) and/or pricing macro(s) referencing the range table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1431 RANGETABLE-230

Message

```
The range table "{rangeTableId}" cannot be deleted because it is referenced by
at least one of the following components:
charge component, refill logic, allowance logic, charge plan, refill plan,
pricing macro, or provider contract.
```

Legend

- `{rangeTableId}`: The ID of the range table

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete the charge(s), refill logic object(s), allowance logic object(s), charge plan(s), refill plan(s), pricing macro(s) and/or provider contract(s) referencing the range table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1432 RANGETABLE-231

Message

```
The range table class must have less than {inColumnMax} input columns.
```

Legend

- `{inColumnMax}`: The maximum of input columns that is allowed in the range table class definition

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Delete the additional input columns.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1435 RANGETABLE-234

Message

```
Impossible to modify the range table class because the number of input columns
{specifiedInColumns} does not correspond to the number of input columns
{realInColumns}
existing in the range table class.
```

Legend

- `{specifiedInColumns}`: The specified number of input columns in the operation
- `{realInColumns}`: The number of input columns existing in the range table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the number of input columns to the number of input columns of the range table class or create a new range table class for the specified input columns.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1436 RANGETABLE-235

Message

```
You cannot replace the name of the input column "{existingInColumnName}" at
index {inColumnIndex} by "{operationInColumnName}".
```

Legend

- `{existingInColumnName}`: The name of the input column in the range table class
- `{inColumnIndex}`: The index of the input column in the range table class
- `{operationInColumnName}`: The name of the input column within the operation

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the input column in the operation or create a new range table class with an input column having the specified name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1438 RANGETABLE-237

Message

```
All the rows or range sets with the input values {rangeTableInputValues} have
an upper bound. Because the range table class is unbounded, one row or range set
```

```
for those input
values must be unbounded.
```

Legend

- `{rangeTableInputValues}`: The input values of the range table that must be unbounded

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set a row or range set without upper bound.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

This error code is valid from SAP CC version number 5.0 SP 4 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1444 RANGETABLE-243

Message

```
The number of input columns {inputColumnNbOp} does not correspond to the number
of input columns {inputColumnNbClass} declared in the range table class.
```

Legend

- `{inputColumnNbOp}`: The number of input columns in the operation
- `{inputColumnNbClass}`: The number of input columns declared in the range table class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the number of input columns.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

The field delimiter must be a single character, except a double quote.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Related Error Code: `260`

Related Technical Module: `RANGETABLE`

`RANGETABLE [page 76]`

Next Actions and Steps (Troubleshooting)

1. Check the settings of the operation request. Some required information is wrong.
   The field delimiter must be a single character.

   > ⓘ Note
   >
   > In the operation request, you cannot specify a double quote as a field delimiter.

2. Change the API call or SOAP Web Services operation consumption.
3. Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

The reference date property name is not defined.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set up the reference date property name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1478 RANGETABLECOMPONENT-8

Message

```
The reference date property name "{referenceDatePropertyName}" does not
reference an existing rating context property.
```

Legend

- `{referenceDatePropertyName}`: The name of the reference date parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set up the reference date property name to an existing rating context property.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1494 RANGETABLECOMPONENT-24

Message

```
The rating context property "{rangeTableIdPropertyName}" defining a range
table ID does not include the mandatory additional information "{addInfoName}".
```

Legend

- `{rangeTableIdPropertyName}`: The name of the range table ID rating context property
- `{addInfoName}`: The name of the data type additional information

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the additional information to this property specified in the logic component.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1495 RANGETABLECOMPONENT-25

Message

```
The input mapping is mandatory and must contain rating context property names
that match range table class: "{inputMappingCount}".
```

Legend

- `{inputMappingCount}`: The number of input mapping properties to define

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set up a rating context property name for each input column of the range table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1496 RANGETABLECOMPONENT-26

Message

```
The property name "{inputMappingPropertyName}" defined for the input mapping
does not reference an existing rating context property of type String.
```

Legend

- `{inputMappingPropertyName}`: The name of the input mapping property

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set up an existing property name of type String that exist in the rating context for the input mapping.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1498 RANGETABLECOMPONENT-28

Message

```
The component cannot reference the range table "{rangeTable}" because
this range table has an agreement ID.
```

Legend

- `{rangeTable}`: The name of the range table referenced by the component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Select a range table without agreement ID.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The string value of the Additional Information "{additionalInformationName}"
at index {additionalInformationIndex} is missing.
```

Legend

- `{additionalInformationName}`: The name of the Additional Information
- `{additionalInformationIndex}`: The index of the Additional Information

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a string value to the Additional Information.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> → Recommendation
>
> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to 4.0 SP00. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1511 REFILLPLAN-13 (Revoked)

> ⚠ Caution
>
> This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The type "{additionalInformationType}" of the Additional Information
"{additionalInformationName}" at index {additionalInformationIndex} is
unsupported (the
supported types are string, number, date).
```

Legend

- `{additionalInformationType}`: The unsupported type of the Additional Information
- `{additionalInformationName}`: The name of the Additional Information
- `{additionalInformationIndex}`: The index of the Additional Information

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use a supported type (string, number, date) for the Additional Information.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

The Account Assignment "{accountAssignmentName}" at index
{accountAssignmentIndex}
does not refer to an Account Assignment Reference of the Refill Plan Item.
```

Legend

- `{accountAssignmentName}`: The name of the Account Assignment

- `{accountAssignmentIndex}`: The index of the Account Assignment

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Link the Account Assignment or remove it.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1528 REFILLPLAN-35

Message

```
The name of the User Technical Identifier at index {userTechIdIndex} is
missing.
```

Legend

- `{userTechIdIndex}`: The index of the User Technical Identifier in the Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a name to the User Technical Identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1529 REFILLPLAN-36

Message

```
The name "{userTechIdName}" of the User Technical Identifier at index
{secondIndex} is already used by the User Technical Identifier at index
{firstIndex}.
```

Legend

- `{userTechIdName}`: The duplicated name
- `{secondIndex}`: The index of the second occurrence of the name in User Technical Identifiers
- `{firstIndex}`: The index of the first occurrence of the name in User Technical Identifiers

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the User Technical Identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Message

```
The type "{parameterType}" of the Parameter "{parameterName}" at index
{parameterIndex} is unsupported (the supported types are string, number, date).
```

Legend

- `{parameterType}`: The unsupported type of the Parameter
- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use a supported type (string, number, date) for the Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1545 REFILLPLAN-56

Message

```
The name of the Parameter Reference at index {parameterIndex} is missing.
```

Legend

- `{parameterIndex}`: The index of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a name to the Parameter Reference.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1550 REFILLPLAN-61

Message

```
The type "{parameterReferenceType}" of the Parameter Reference
"{parameterReferenceName}"
at index {parameterReferenceIndex} is not compatible with the type
"{parameterType}" of
the targeted Parameter.
```

Legend

- `{parameterReferenceType}`: The type of the Parameter Reference
- `{parameterReferenceName}`: The name of the Parameter Reference
- `{parameterReferenceIndex}`: The index of the Parameter Reference
- `{parameterType}`: The type of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Link the Parameter Reference to a compatible Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1561 REFILLPLAN-72

Message

```
The Account Assignment "{targetName}" targeted by the Account Assignment
Reference
"{accountAssignmentReferenceName}" at index {accountAssignmentReferenceIndex}
does not exist.
```

Legend

- `{targetName}`: The target name of the Account Assignment Reference
- `{accountAssignmentReferenceName}`: The name of the Account Assignment Reference
- `{accountAssignmentReferenceIndex}`: The index of the Account Assignment Reference

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the target name of the Account Assignment Reference into an existing one or create a new Account Assignment in the Refill Plan with this target name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

Enrich your SAP user experience and join our community of professionals:

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1562 REFILLPLAN-73

Message

```
The type of the Account Assignment Reference "{accountAssignmentReferenceName}"
at index {accountAssignmentReferenceIndex} is missing, invalid or unknown (the
supported type
is prepaid).
```

Legend

- `{accountAssignmentReferenceName}`: The name of the Account Assignment Reference
- `{accountAssignmentReferenceIndex}`: The index of the Account Assignment Reference

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a type to the Account Assignment Reference or change it into prepaid.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1563 REFILLPLAN-74

Message

```
The type "{accountAssignmentReferenceType}" of the Account Assignment Reference
"{accountAssignmentReferenceName}" at index {accountAssignmentReferenceIndex} is
not
compatible with the type "{accountAssignmentType}" of the targeted Account
Assignment.
```

Legend

- `{accountAssignmentReferenceType}`: The type of the Account Assignment Reference
- `{accountAssignmentReferenceName}`: The name of the Account Assignment Reference
- `{accountAssignmentReferenceIndex}`: The index of the Account Assignment Reference
- `{accountAssignmentType}`: The type of the Account Assignment

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Link the Account Assignment Reference to a compatible Account Assignment.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1564 REFILLPLAN-75

Message

```
The service name of the User Technical Identifier Reference at index
{userTechnicalIdentifierReferenceIndex} is missing.
```

Legend

- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference in the Refill Plan Item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a service name to the User Technical Identifier Reference.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1565 REFILLPLAN-76

Message

```
The service "{userTechnicalIdentifierReferenceService}" of the User Technical
Identifier Reference at index {secondIndex} is already used by the User
Technical Identifier
Reference at index {firstIndex}.
```

Legend

- `{userTechnicalIdentifierReferenceService}`: The duplicated service
- `{secondIndex}`: The index of the second occurrence of the name in User Technical Identifier References
- `{firstIndex}`: The index of the first occurrence of the name in User Technical Identifier References

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the service of the User Technical Identifier Reference.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1567 REFILLPLAN-78

Message

```
The User Technical Identifier "{targetName}" targeted by the User Technical
Identifier Reference "{userTechnicalIdentifierReferenceService}" at index
{userTechnicalIdentifierReferenceIndex} does not exist.
```

Legend

- `{targetName}`: The target name of the User Technical Identifier Reference
- `{userTechnicalIdentifierReferenceService}`: The service of the User Technical Identifier Reference
- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the target name of the User Technical Identifier Reference into an existing one or create a new User Technical Identifier in the Refill Plan with this target name.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1578 REFILLPLAN-96

Message

```
The Account Assignment at the index {accountAssignmentIndex} is empty.
```

Legend

- `{accountAssignmentIndex}`: The index of the empty Account Assignment that needs to be changed

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Replace it by a valid Account Assignment or remove it.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1595 REFILLPLAN-130

Message

```
User Technical Identifiers are defined while no usage refill is assigned to
the Refill Logic "{refillLogicId}".
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the User Technical Identifiers.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1596 REFILLPLAN-132

Message

```
The Refill Plan is missing in the ModifyRefillPlanOp.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the Refill Plan to the ModifyRefillPlanOp.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1597 REFILLPLAN-133

Message

```
The Refill Plan with the id {refillPlanId} does not exist.
```

Legend

- `{refillPlanId}`: The ID of the Refill Plan which does not exist

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the ID of the Refill Plan into an existing one or first create the Refill Plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1598 REFILLPLAN-134

Message

```
Impossible to modify the Refill Plan because the specified owner
{specifiedOwner}
    does not correspond to the owner {realOwner} existing in the Refill Plan.
```

Legend

- `{specifiedOwner}`: The specified owner in the operation
- `{realOwner}`: The owner existing in the Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the owner into the owner of the Refill Plan or create a new Refill Plan for the specified owner.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1599 REFILLPLAN-135

Message

```
The Refill Logic "{refillLogicId}" referred to by the Refill Plan Item
"{refillPlanItemId}" at index {refillPlanItemIndex} is unknown.
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic
- `{refillPlanItemId}`: The ID of the Charging Contract Item
- `{refillPlanItemIndex}`: The index of the Charging Contract Item in the Charging Contract

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the refillLogicId into an existing Refill Logic identifier.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1600 REFILLPLAN-136

Message

```
Internal server error. Impossible to modify the Refill Plan because the Refill
Plan Item "{refillPlanItemId}" at index {refillPlanItemIndex} refers to no known
Refill
Logic.
```

Legend

- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{refillPlanItemIndex}`: The index of the Refill Plan Item in the Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Contact the support.

Verify your changes.

4.1601 REFILLPLAN-138

Message

```
The Refill Plan Item "{refillPlanItemId}" at index {refillPlanItemIndex} already
refers to the Refill Logic "{originalRefillLogicId}" and cannot refer to the
Refill Logic
"{newRefillLogicId}" at the same time.
```

Legend

- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{refillPlanItemIndex}`: The index of the Refill Plan Item in the Refill Plan
- `{originalRefillLogicId}`: The original ID of the Refill Logic
- `{newRefillLogicId}`: The new ID of the Refill Logic

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use the Refill Logic already referred to by the Refill Plan Item or create a new Refill Plan Item.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

>
> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1612 REFILLPLAN-173

Message

```
The parameter is a mapping table key and could not be linked to a mapping
table class.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove the mapping table class additional information.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{refillPlanItemIndex}`: The index of the Refill Plan Item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the ID of an existing Refill Record Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1629 REFILLPLAN-190

Message

```
Internal server error. Impossible to modify the Refill Plan because the Refill
Plan Item "{refillPlanItemId}" at index {refillPlanItemIndex} refers to an
unknown Refill
Record Class.
```

Legend

- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{refillPlanItemIndex}`: The index of the Refill Plan Item in the Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Contact the support.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1630 REFILLPLAN-191

Message

```
The code of the refill record class ({refillRecordClassCode}) referred to
by the Refill Plan Item "{refillPlanItemId}" at index {refillPlanItemIndex} does
not
match any Refill Record Class.
```

Legend

- `{refillRecordClassCode}`: The code of the Refill Record Class
- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{refillPlanItemIndex}`: The index of the Refill Plan Item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the ID of an existing Refill Record Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1634 REFILLPLAN-204

Message

```
The name is missing in the Refill Item Class property at index {propertyIndex}.
```

Legend

- `{propertyIndex}`: The index of the property in the Refill Item Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a name to the Refill Item Class property.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1635 REFILLPLAN-205 (Revoked)

> ⚠ Caution
>
> This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The Refill Item Class "{refillItemClassId}" has not been saved in the
database due to "{sqlErrorMessage}".
```

Legend

- `{refillItemClassId}`: The ID of the Refill Item Class
- `{sqlErrorMessage}`: The error message of the SQL exception

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check that the database is online.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Legend

- `{refillItemClassId}`: The ID of the Refill Item Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

First delete the Refill Logic object(s).

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1646 REFILLPLAN-216 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The Refill Item Class "{refillItemClassId}" has not been deleted in the
database due to "{sqlErrorMessage}".
```

Legend

- `{refillItemClassId}`: The ID of the Refill Item Class
- `{sqlErrorMessage}`: The error message of the SQL exception

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check that the database is online.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1654 REFILLPLAN-236

Message

```
The {mappingTableClassName} Mapping Table Class associated with the
{parameterName}
parameter in the Refill Logic does not exist.
```

Legend

- `{mappingTableClassName}`: The name of the Mapping Table Class
- `{parameterName}`: The name of the parameter of type Mapping Table ID

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the Mapping Table Class to an existing one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1655 REFILLPLAN-237

Message

```
The {parameterName} parameter of the Refill Plan declares the {mappingTableName}
Mapping Table with the {actualMappingTableClass} Mapping Table Class while this
table is
of class "{expectedMappingTableClass}".
```

Legend

- `{parameterName}`: The name of the parameter of type Mapping Table ID
- `{mappingTableName}`: The name of the Mapping Table
- `{actualMappingTableClass}`: The name of the Mapping Table Class associated with the Mapping Table
- `{expectedMappingTableClass}`: The name of the Mapping Table Class which is expected

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the name of the Mapping Table to a Mapping Table having the expected Mapping Table Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1662 REFILLPLAN-245

Message

```
The range table class "{parameterRangeTableClass}" declared in the Parameter
is incompatible with the one declared in the Charge Component
"{chargeComponentRangeTableClass}".
```

Legend

- `{parameterRangeTableClass}`: The range table class of the Parameter
- `{chargeComponentRangeTableClass}`: The range table class declared in the Charge Component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Declare the right range table class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1663 REFILLPLAN-246

Message

```
The refill plan Parameter "{parameterName}" at index {parameterIndex}
points to an unknown range table "{parameterValue}".
```

Legend

- `{parameterName}`: The name of the Parameter
- `{parameterIndex}`: The index of the Parameter
- `{parameterValue}`: The value of the Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the value to a known range table.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1680 REFILLPLAN-318

Message

```
The Refill Item Class "{refillItemClassName}" referred to in the usage refill
"{usageRefillName}" does not exist.
```

Legend

- `{refillItemClassName}`: The name of the Refill Item Class that does not exist
- `{usageRefillName}`: The name of the usage refill with no refill component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use an existing Refill Item Class in the usage refill.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1681 REFILLPLAN-319

Message

```
The Refill Logic "{refillLogicId}" already exists.
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic that already exists

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use another ID or use the ModifyRefillLogicOp to modify the Refill Logic.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1682 REFILLPLAN-320

Message

```
The Refill Logic "{refillLogicId}" has not been initialized for an unknown
reason.
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic that has not been initialized

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check that the Refill logic is unique.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1686 REFILLPLAN-324

Message

```
The Refill Logic owner "{refillLogicOwner}" is not modifiable in the Refill
Logic "{refillLogicId}".
```

Legend

- `{refillLogicOwner}`: The owner of the Refill Logic
- `{refillLogicId}`: The ID of the Refill Logic

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the owner of the Refill Logic.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1688 REFILLPLAN-326

Message

```
The Refill Logic "{refillLogicId}" cannot be deleted because it is referred
to by one or more Refill Plans.
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic that is referred to by a Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

First delete the Refill Plan(s).

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1690 REFILLPLAN-333

Message

```
The Refill Logic "{refillLogicId}" is set to manage multicurrency but the
currency "{currencyCode}" is already set.
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic
- `{currencyCode}`: The code of the currency that has been set

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Mark the Refill Logic as multicurrency or remove the currency that has been set.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1691 REFILLPLAN-334

Message

```
The Refill Logic "{refillLogicId}" is marked as monocurrency but no currency
is set.
```

Legend

- `{refillLogicId}`: The ID of the Refill Logic

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a currency in the refill logic.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1692 REFILLPLAN-335

Message

```
The counter name "{counterName}" at index {counterIndex} is unknown to the
counter name dictionary whereas it is visible to the external system.
```

Legend

- `{counterName}`: The name of the counter unknown to the counter name dictionary
- `{counterIndex}`: The index of the counter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the counter name to the counter name dictionary or change the counter name into a known one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

in the CreateRefillRecordClassOp.
```

Legend

- `{refillRecordClassCode}`: The code of the Refill Record Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add the owner of the Refill Record Class to the CreateRefillRecordClassOp.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1698 REFILLPLAN-403

Message

```
The Refill Record Class of code "{refillRecordClassCode}" already exists.
```

Legend

- `{refillRecordClassCode}`: The code of the Refill Record Class that already exists

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use another code or use the ModifyRefillRecordClassOp to modify the Refill Record Class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1715 REFILLPLAN-458

Message

```
Impossible to map the property name "{propertyName}" of type "{propertyType}"
onto the Refill Record Class Field "{refillRecordClassFieldName}" of type
"{refillRecordClassFieldType}".
```

Legend

- `{propertyName}`: The name of the property associated to the Refill Record Class Field
- `{propertyType}`: The type of the property associated to the Refill Record Class Field
- `{refillRecordClassFieldName}`: The name of the Refill Record Class Field
- `{refillRecordClassFieldType}`: The type of the Refill Record Class Field

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set a valid property type for the Refill Record Class Field.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1719 REFILLPLAN-462 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The Refill Record Class Field "{refillRecordClassFieldName}" cannot be
modified if no property value or property name is set.
```

Legend

- `{refillRecordClassFieldName}`: The name of the Refill Record Class Field

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the property name and the property value of the Refill Record Class Field.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1731 REFILLPLAN-486

Message

```
The type of the additional info "{additionalInformationName}" cannot be
modified because the Refill Plan "{refillPlanId}" has been released.
```

Legend

- `{additionalInformationName}`: The name of the Additional Information
- `{refillPlanId}`: The ID of the Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Create a new Refill Plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1748 REFILLPLAN-504

Message

```
The refill plan item "{refillPlanItemId}" cannot be modified because the Refill
Plan "{refillPlanId}" has been released.
```

Legend

- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{refillPlanId}`: The ID of the Refill Plan

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Create a new Refill Plan.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1765 REFILLPLAN-522

Message

```
The Refill Record Mapping of "{refillPlanItemId}" Refill Plan Item contains
the "{entryName}" entry with the type: {entryType}. This type is not compatible
with the one
defined in the "{refillRecordClassId}" Refill Record Class: {propertyType}.
```

Legend

- `{refillPlanItemId}`: The ID of the refill plan item
- `{entryName}`: The entry name in the Refill Record Mapping
- `{entryType}`: The entry type in the Refill Record Mapping

- `{refillRecordClassId}`: The ID of the Refill Record Class
- `{propertyType}`: The property type in the Refill Record Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the validity of the components in the one-shot refill.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1766 REFILLPLAN-523 (Revoked)

⚠ Caution

This error code has been **revoked**. Verify its validity in your running SAP CC system.

Message

This error code is now revoked in SAP Convergent Charging (SAP CC):

```
The code of the refill record class ({refillRecordClassCode}) referred to
by the Refill Plan Item "{refillPlanItemId}" cannot be changed to
({newRefillRecordClassCode}).
```

Legend

- `{refillRecordClassCode}`: The original code of the Refill Record Class
- `{refillPlanItemId}`: The ID of the Refill Plan Item
- `{newRefillRecordClassCode}`: The new code of the Refill Record Class

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the ID of the original refill record class.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1767 REFILLPLAN-525

Message

```
The name of the account event refill is not set.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the name of the account event refill.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1768 REFILLPLAN-526

Message

```
The account event refill "{accountEventRefillName}" does not contain any
refill component.
```

Legend

- `{accountEventRefillName}`: The name of the account event refill with no refill component

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a refill component to the account event refill.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1770 REFILLPLAN-528

Message

```
The service name "{serviceName}" of the User Technical Identifier Reference
at index {userTechnicalIdentifierReferenceIndex} is reserved for internal use.
```

Legend

- `{serviceName}`: The name of the service, as provided
- `{userTechnicalIdentifierReferenceIndex}`: The index of the User Technical Identifier Reference within the refill plan item

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the service name to a value that is not reserved for internal use.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1771 REFILLPLAN-529

Message

```
The parameter reference "{parameterRefName}" at index {parameterRefIndex} has
a date type which is incompatible with the refill logic parameter whose type is
{refillLogicParameterType}.
```

Legend

- `{parameterRefName}`: The name of the Parameter Reference
- `{parameterRefIndex}`: The index of the Parameter Reference
- `{refillLogicParameterType}`: The type of the Refill Logic Parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Change the parameter reference type to the correct one.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1774 REFILLPLAN-532

Message

```
The type "{parameterRefType}" of the Parameter Reference "{parameterRefName}"
at index {parameterRefIndex} is unsupported (supported types are string, number,
date).
```

Legend

- `{parameterRefType}`: The unsupported type of the Parameter Reference
- `{parameterRefName}`: The name of the Parameter Reference
- `{parameterRefIndex}`: The index of the Parameter Reference

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Use a supported type (string, number, date) for the Parameter.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 5.0 SP 4 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1781 REFILLPLAN-539

Message

```
The parameter "{parameterName}" cannot reference the range table
"{rangeTableId}"
because this range table has an agreement ID.
```

Legend

- `{parameterName}`: The name of the parameter referencing a range table with an agreement ID

- `{rangeTableId}`: The identifier of the range table specified in the parameter

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Select a range table without agreement ID.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 2022 FPS 0 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1793 RFC-1

Message

```
One or more billable items or consumption items could not be loaded into SAP
Convergent Invoicing because they are invalid.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the related error messages and correct the pricing configuration.

Many reasons are possible and can explain the invalid billable item (or invalid consumption item).

Inspect the signaled error messages to locate the issue and solve the situation:

- In the sent billable item and its relating charged item
- In the sent consumption item and its relating charged chargeable item
- In master data (pricing catalog, mapping/range table)
- In customer master data (subscriber account, provider contract and its contract items, subscriber mapping/range tables)
- In system settings

✤ Example

In Cockpit, the app Process a Chargeable Item may display this error when an SAP CC pricing specialist triggered the manual charging of a chargeable item for a service consumption.

Business Context

The error occurred during the processing of the *Billable Items Immediate Loading* feature and its functions. See Billable Items Immediate Loading.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Related Information

Immediate Loading of Billable Items

4.1794 RFC-2

Message

```
One or more billable items or consumption items could not be loaded into SAP
Convergent Invoicing because of a communication error.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Execute the operation again later.

Many reasons are possible and can explain the communication error. The failure can be permanent or temporary.

Business Context

The communication error during the processing of the *Billable Items Immediate Loading* feature and its functions. See Billable Items Immediate Loading.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 4.0 SP04 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

> → Remember
>
> **Error codes can be deprecated or revoked at any time.**
>
> - Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1798 SPENDINGSTATUS-4

Message

```
The label "{label}" at the index "{index}" is not valid.
```

Legend

- `{label}`: The invalid label
- `{index}`: The index in the list of label positioning the invalid label

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the previous error messages in the error stack.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 4.0 SP04 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1799 SPENDINGSTATUS-5

Message

```
The label "{label}" is duplicated at the index "{index1}" and "{index2}".
```

Legend

- `{label}`: The invalid label
- `{index1}`: The first index in the list of labels positioning the duplicated label
- `{index2}`: The second index in the list of labels positioning the duplicated label

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Remove a label in the spending status description specified in the operation request.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1800 SPENDINGSTATUS-6

Message

```
The spending status description needs at least a label.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add at least a label in the spending status description.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1808 SPENDINGSTATUS-301

Message

```
Cannot search for spending status descriptions. The search operation or
the specified filter is invalid. Reason: {reasonInformation}.
```

Legend

- `{reasonInformation}`: The additional information describing the error that occurred

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Check the reason information recorded in your error message; The reason is based on the Java Technology. It details the exception raised in the connected SAP CC system. Typical reasons are: Invalid search filter, Back-end database failure.

Refer to the Java/XML API Reference (Core Library) technical documentation for more information about the `com.highdeal.filter.hci.InvalidSearchException`.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Legend

- `{method}`: The method called on the ResultSet
- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {1} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP User Experience

Questions and Answers for SAP Convergent Charging

> → Recommendation
>
> SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.
>
> You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1816 SQL-5

Message

```
The SQLServer database is not in read committed snapshot mode.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Set the Microsoft SQL Server database in read committed snapshot mode. As a dba, execute the command script: `ALTER DATABASE <DB_NAME> SET READ_COMMITTED_SNAPSHOT ON`

Verify your changes.

✤ Example

In an SAP Convergent Charging environment, the Core Database requires this mode.

Refer to the database official documentation for more information about this *read committed snapshot* mode (READ_COMMITTED_SNAPSHOT database option).

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1828 SQL-17

Message

```
Invalid JDBC URI ({jdbcUri}) or related JDBC driver not found.
```

Legend

- `{jdbcUri}`: The JDBC URI[19]

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

[19] Uniform Resource Identifier

Next Actions and Steps (Troubleshooting)

Refer to the documentation of the SQLHELPER_JDBC_URI system parameter to check the syntax of the specified URI.
In case your URI corresponds to an Oracle RDBMS, check that the corresponding JDBC driver is available within your landscape and matches the minimum required version.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> See also Deprecated and Revoked Error Codes [page 58].

4.1833 SQL-22

Message

```
Unable to execute the SQL operation due to {SQLState} SQL state.
```

Legend

- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {0} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Questions and Answers for SAP Convergent Charging

→ Recommendation

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1834 SQL-23

Message

```
Unable to commit the SQL transaction due to {SQLState} SQL state.
```

Legend

- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {0} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> - Texts in error messages may change to improve your user experience. First consider the numerical code for an error
>
> See also Deprecated and Revoked Error Codes [page 58].

4.1851 SQL-40

Message

```
Unable to close prepared statement {SQLStatement} due to {SQLState} SQL state.
```

Legend

- `{SQLStatement}`: The SQL Statement that cannot be closed
- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {1} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1852 SQL-41

Message

```
Unable to execute the prepared statement {SQLStatement} and build a ResultSet
due to {SQLState} SQL state.
```

Legend

- `{SQLStatement}`: The SQL Statement that cannot be executed
- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {1} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1855 SQL-44

Message

```
Unable to set object {ObjectAsString} of type {ObjectType} at position
{ObjectPosition} in the prepared statement {SQLStatement} due to {SQLState} SQL
state.
```

Legend

- `{ObjectAsString}`: A string representing the object passed to setObject
- `{ObjectType}`: The type of the object
- `{ObjectPosition}`: The position of the object
- `{SQLStatement}`: The SQL Statement that cannot be executed
- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {4} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

SAP provides you with the https://community.sap.com/ platform. You can benefit from a wide range of technical and business guidance from a community of experts and share knowledge and your best practices.

You cannot find the answers you are looking for? Contact our community of experts. Share your SAP user experience and feedbacks.

Share your symptoms (error codes) or step-by-step resolutions to a wide range of problems that may occur in your work with SAP Convergent Charging.

Validity

This error code is valid from SAP CC version number 3.0 SP00 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1869 SQL-58

Message

```
Unable to reconnect ID generation connection due to SQL state {SQLStatement}.
```

Legend

- `{SQLStatement}`: The SQL State reached when reconnecting

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {0} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

See also Deprecated and Revoked Error Codes [page 58].

4.1870 SQL-59

Message

```
This database does not support to store strings which end with a space
character ({invalidString}).
```

Legend

- `{invalidString}`: The value with trailing spaces

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Sanitize the data so that strings do not end with a space character.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 4.0 SP04 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1871 SQL-60

Message

```
Unable to retrieve the size of the column {columnName} of the table {tableName}
due to {SQLState} SQL state.
```

Legend

- `{columnName}`: The name of the column
- `{tableName}`: The name of the table
- `{SQLState}`: The SQLState of the SQLException

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Consult your database documentation to get information about the {2} SQL state.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Validity

This error code is valid from SAP CC version number 4.0 SP07 to the software version that this documentation refers to. For newer versions, consult the relevant documentation.

→ Remember

Error codes can be deprecated or revoked at any time.

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1872 SQL-61

Message

```
The server is not connected to the database using the URL {URL}.
```

Legend

- `{URL}`: The database URL

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

The database with the URL {0} is offline or it is not possible to connect to it.
Check the status of the database and reconnect the server to the database using the adequate Admin+ command.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

4.1886 SUBSCRIBERDATA-11

Message

```
Cannot import Access ''{serviceId}''/''{userServideId}'' for Subscription
''{subscriptionCode}'' because a period overlaps the existing Access.
```

Legend

- `{serviceId}`: The service ID of the Access
- `{userServideId}`: The user service ID of the Access
- `{subscriptionCode}`: The code of the Subscription

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Correct the Access chronology.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

> **Error codes can be deprecated or revoked at any time.**

- Before you start the troubleshooting, make sure that you have the latest version of this document. It is available in the Software Development Kit (SDK) of SAP Convergent Charging
- Texts in error messages may change to improve your user experience. First consider the numerical code for an error

See also Deprecated and Revoked Error Codes [page 58].

4.1904 TRANSPORTREQUEST-9

Message

```
The mandatory filter in the Delete Transport Request operation is missing.
```

The meaning of this error message depends on the software layers and internal functions of the SAP CC system that handles the message. See the note to adapt the terminology [page 57] to the concepts and data models you work with.

Next Actions and Steps (Troubleshooting)

Add a filter in the Delete Transport Request operation.

Verify your changes.

Notes for Troubleshooting

Consider the specifications [page 59] of the appropriate technical interfaces: Web Services, HTTP Communication Interface (HCI), or Message TCP.

Videos Hosted on External Platforms

Some videos may point to third-party video hosting platforms. SAP cannot guarantee the future availability of videos stored on these platforms. Furthermore, any advertisements or other content hosted on these platforms (for example, suggested videos or by navigating to other videos hosted on the same site), are not within the control or responsibility of SAP.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.
The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP's gross negligence or willful misconduct.

Bias-Free Language

SAP supports a culture of diversity and inclusion. Whenever possible, we use unbiased language in our documentation to refer to people of all cultures, ethnicities, genders, and abilities.
