Convergent Invoicing

Convergent Invoicing provides automated, scalable invoicing capabilities for a high volume of transactional data from multiple sources.

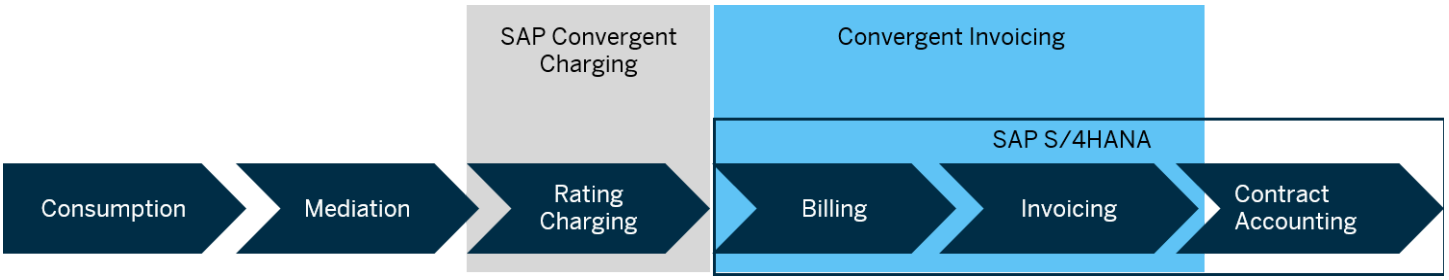

The Billing in Convergent Invoicing and Invoicing in Convergent Invoicing components together make up the core process of Convergent Invoicing.

Integration

Convergent Invoicing enables you to integrate the following applications:

- Convergent Mediation by DigitalRoute
- SAP Convergent Charging
- Contract Accounts Receivable and Payable

This comprehensive integration enables you to implement the business process from the consumption of a service through pricing and billing right up to dispatch of the invoice to the customer and creation of posting documents.

Consume-to-Cash Scenario

Convergent Invoicing also offers flexible integration of its billing and invoicing processes with other SAP components and SAP products, and with external applications. For more information about integration options, see Integration with Other Components and Products.

Master Data in Contract Accounting

Convergent Invoicing uses master data from Contract Accounts Receivable and Payable, such as business partners and contract accounts.

For information about the master data used in Contract Accounts Receivable and Payable, see Master Data.

Rating in Convergent Invoicing

Rating means the mass processing of consumption information, based on consumption items, to calculate a monetary value for the business transactions represented by consumption items.

Business transactions or business events can initiate the creation of consumption items. Rating in Convergent Invoicing includes the following basic steps:

1. Consumption data is transferred to Convergent Invoicing, so that consumption items are created.

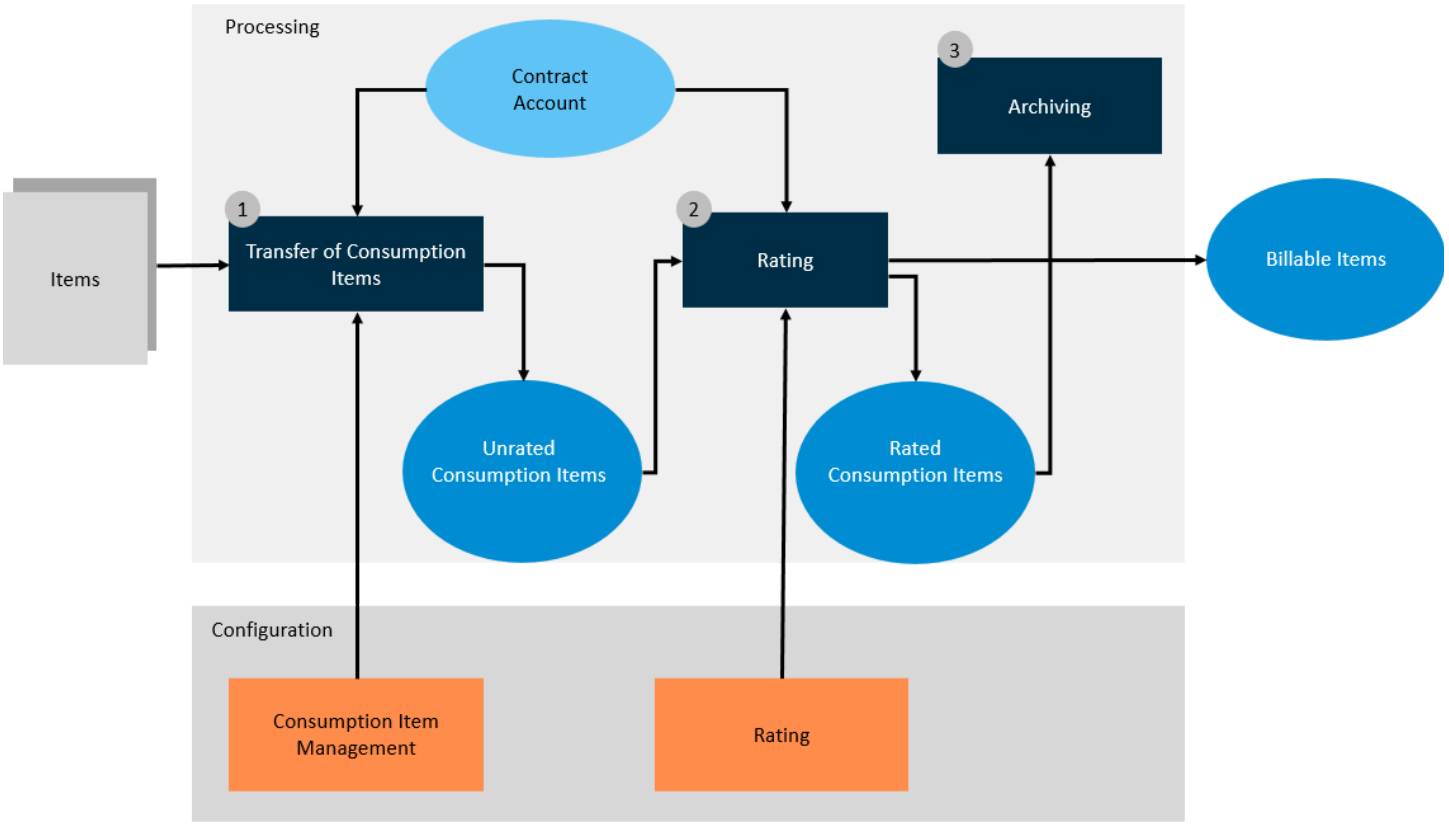

For more information, see Creation and Upload of Consumption Items.

2. The uploaded consumption items are rated. As a result of this rating, billable items are created, which are further processed in billing. Rating transfers the consumption items from **Ratable** status to **Rated** status.

   For more information, see Rating Processes.

3. Finally, you can archive rated consumption items.

   For more information, see Archiving Rated Consumption Items.

Overview of Rating Processes

The following sections deal with data storage and rating of consumption items in Convergent Invoicing:

- Basic Concepts of Rating
- Configuration of Consumption Item Classes
- Creation and Upload of Consumption Items
- Consumption Item Management
- Rating Processes
- Integration with Sales and Distribution Pricing
