Release Note - What's New in SP09
SAP Convergent Charging
Document Version: 1.0 – 2015-07-10

CUSTOMER

SAP Convergent Charging 4.0 SP09

Typographic Conventions

Type Style	Description
Example	Words or characters quoted from the screen. These include field names, screen titles, pushbuttons labels, menu names, menu paths, and menu options. Textual cross-references to other documents.
Example	Emphasized words or expressions.
`EXAMPLE`	Technical names of system objects. These include report names, program names, transaction codes, table names, and key concepts of a programming language when they are surrounded by body text, for example, SELECT and INCLUDE.
`Example`	Output on the screen. This includes file and directory names and their paths, messages, names of variables and parameters, source text, and names of installation, upgrade and database tools.
`Example`	Exact user entry. These are words or characters that you enter in the system exactly as they appear in the documentation.
`<Example>`	Variable user entry. Angle brackets indicate that you replace these words and characters with appropriate entries to make entries in the system.
`EXAMPLE`	Keys on the keyboard, for example, `F2` or `ENTER`.

1 Introduction

Audience

- Solution and technology consultants
- System and application administrators
- SAP sales representatives

About this Document

This *Release Note - What's New* documentation lists all the features introduced in SAP Convergent Charging 4.0 SP09. This *SAP product document* completes the *Release Note - Delta Information* documentation delivered with the initial shipment of SAP CC 4.0.

> **Note**
>
> If you update from a support package older than SAP CC 4.0 SP08, consider all the *Release Note - What's New* documents published since the delivery of this support package.

What's New in SP09

The support package 09 provides the following features in your SAP system landscape:

- Core Tool: Charged Item Mapping (Changed)
- Core Tool: Display Field Size (Enhanced)
- Performances: Contract Optimization (Enhanced)
- WS: No Access Notification (Changed)
- JCo Update

What's New Section in Guides

For more details about the new features of this support package, see the *What's New* section in the guides of SAP Convergent Charging 4.0.

Abbreviations

The table below shows the list of abbreviations used throughout this document.

2 Before You Start

SAP BRIM Solution

SAP CC 4.0 is part of the *SAP Billing and Revenue Innovation Management (BRIM) Solution* with the SAP ERP and SAP CRM components of SAP Business Suite 7 Innovation 2013.

Depending on your *SAP Industry*, you consider the following ERP applications:

- Cross Industries: SAP ERP/FI-CA (Contract Accounts Receivable and Payable)
- SAP for Telecommunications: SAP ERP/RM-CA (Contract Accts. Rec./Payable for Telecommunications)
- SAP for Utilities: SAP ERP/Contract Accts Receivable and Payable for the Utilities Industry

SAP Help Portal

SAP Help Portal is the central place to access *SAP product documentation*. Find the documentation of SAP Convergent Charging at: http://help.sap.com/cc.

Important SAP Notes

The *SAP Notes* shown in the table below contain information on the delivery and implementation of this support package of SAP CC 4.0 software:

Title	SAP Note	Description
SAP CC 4.0 Support Package 09	*2159834*	This delivery note contains information on SAP CC support package. It lists the included corrections and provides last minutes.
Upgrade or update to CC4.0 SP09 from previous installation	*2177765*	This production note contains information on the implementation of this support package: • Upgrade from former release (SAP CC 3.0) • Update from previous support package of SAP CC 4.0

The *SAP Notes* shown in the table below contain information on the installation of SAP CC 4.0 initial shipment and on SAP CC previous support package:

Title	SAP Note	Description
Release and Information Note for SAP Convergent Charging 4.0	1856154	This Release and Information Note (RIN) contains information and references to documents or notes to install the initial shipment stack of SAP CC 4.0.

3 Core Tool: Charged Item Mapping (Changed)

3.1 Feature Overview

Summary

As of SP09, SAP Convergent Charging Core Tool is enhanced to make the customization of the mapping of charged item classes and refill record classes easier.

In offers, charge plans, refill plans and allowance plans, you can now:

- Change the class on which the charged item or the refill record is based
- Overwrite the value of a field defined at class level
- Unset the mapping for a field by choosing the *Empty* value

All these changes are possible whatever the release status of the plan is.

Benefits

The management of mapping lifecycle is more flexible. You can easier fix potential errors in mappings.

More information

See *SAP CC Core Tool Online Help* for more information about this feature.

3.2 Effect on User Interfaces

Changes in SAP CC Core Tool

In charged item classes and refill record classes, the new value *Undefined* is added (see Figure 1). This value means that it is recommended to set the value of this field at plan level.

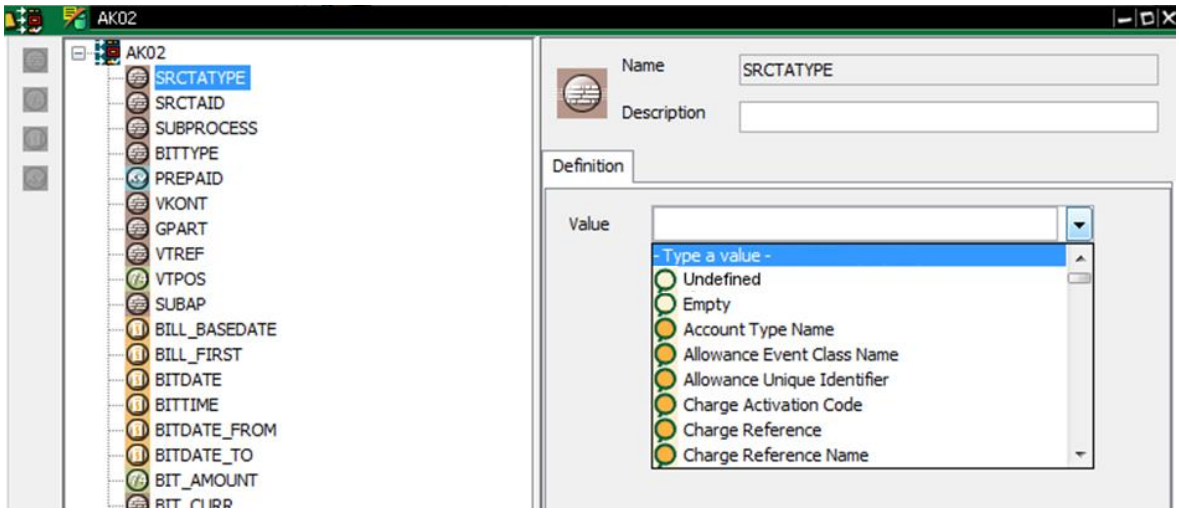

Figure 1: The value *Undefined* in the charged item class.

CustomerCustomer

You can customize the display of the mapping in the plan. Click the button shown on Figure 2 to stop displaying the columns *Default Value* and *Redefine*. The columns *Charged Item Field* and *Property / Value* are always displayed.

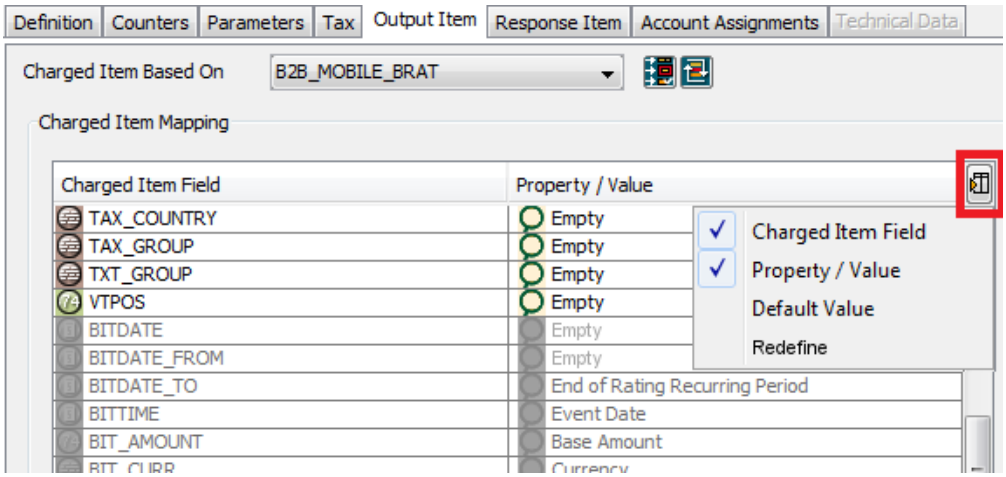

Figure 2: The button to customize the display of the mapping.

You can overwrite the value defined at class level by selecting the *Redefine* checkbox and changing the value in the column *Property / Value* (see Figure 3).

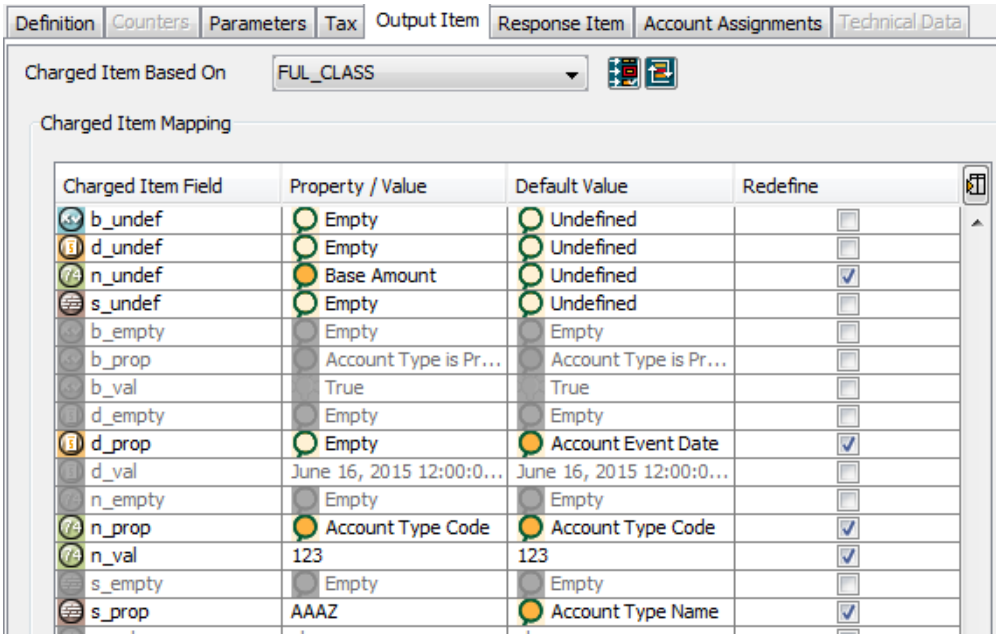

Figure 3: Redefining the value of a field in the mapping at plan level.

4 Core Tool: Display Field Size (Enhanced)

4.1 Feature Overview

As of SP09, SAP Convergent Charging enhanced the display of the fields related to the billable and the consumption item mappings.

Summary

SAP CC Core Tool now displays the same field sizes in the billable and the consumption item classes as the ones in SAP ERP/FI-CA.

The display of the billable and the consumption item mappings is enhanced with the following changes:

- A new field named *Length*
- The *Maximal Length* field is renamed *Size (Bytes)*

> **Note**
>
> This feature is available only if you use SAP CC with SAP ERP/FICA. The value of these fields are replicated from the SAP ERP system.

Benefits

The display of the fields in the billable and the consumption item mappings is consistent between SAP CC and SAP ERP/FI-CA.

More information

See *SAP CC Core Tool Online Help* of for more information about this feature.

4.2 Effect on User Interfaces

Changes in SAP CC Core Tool

The *Billable Item Mapping* (see Figure 4) and the *Consumption Item Mapping* (see Figure 5) windows are enhanced with a new field named *Length*. The *Maximal Length* field is renamed *Size (Bytes)*.

CustomerCustomer

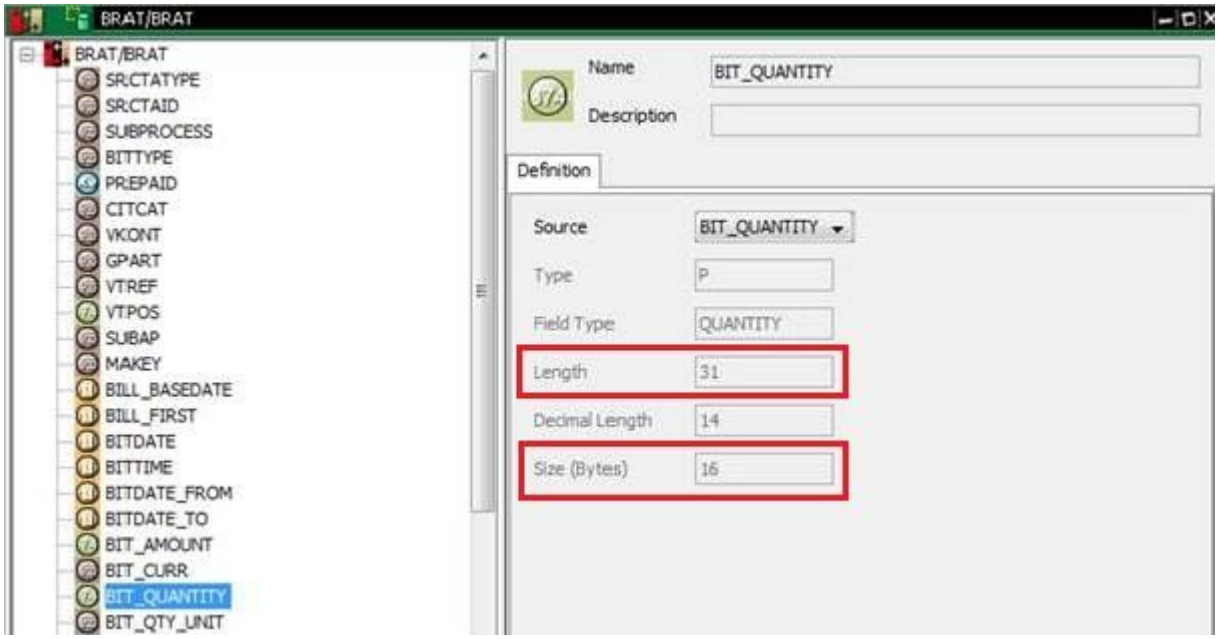

Figure 4: The fields *Length* and *Size (Bytes)* in the *Billable Item Mapping* window.

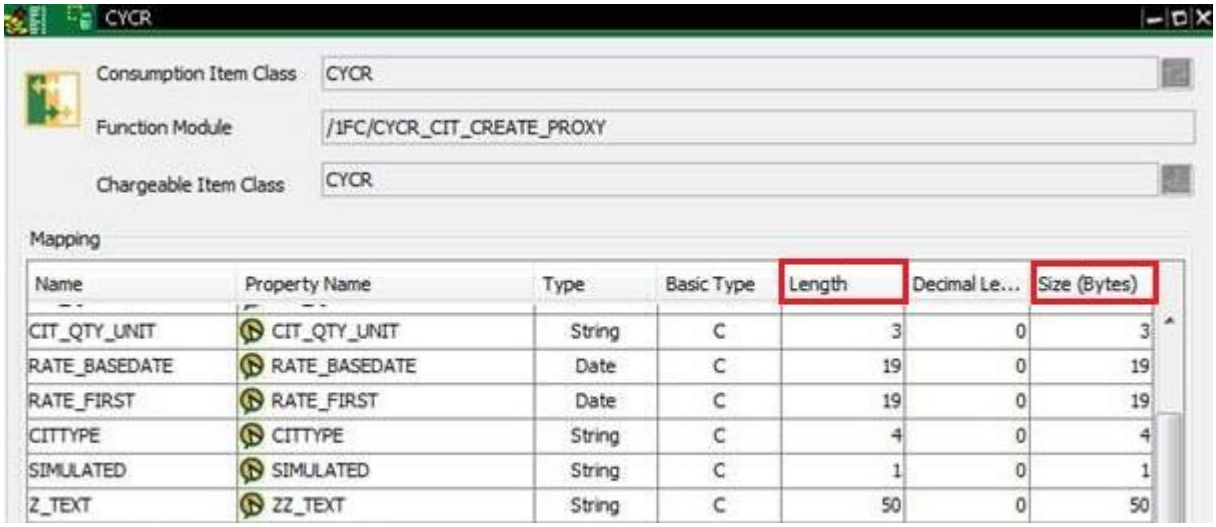

Figure 5: The fields *Length* and *Size (Bytes)* in the *Consumption Item Mapping* window.

4.3 Update

The new fields *Length* and *Size (Bytes)* can be empty in the following cases:

- If the SAP CC system is connected to an SAP ERP system which is not up-to-date.
- If the billable item mapping or the consumption item mapping was existing before the update of the SAP CC system to CC4.0 SP09.

5 Performances: Contract Optimization (Enhanced)

5.1 Feature Overview

As of SP09, the management of the versions of the provider contracts in SAP Convergent Charging is enhanced.

Summary

This enhancement makes the number of versions of a provider contract decrease by:

- Avoiding creating unnecessary versions (always enabled)
- Merging existing versions if possible (disabled by default, see the section System Configuration)

> **Note**
>
> The version of a provider contract is also called a revision in SAP CC technical documentation such as *SAP CC Web Services Documentation*.

Benefits

This feature reduces the memory footprint of the provider contracts and increases performances.

More Information

See *SAP CC Web Services Documentation* and *SAP CC Core Tool Online Help* for more information about this enhancement.

5.2 System Configuration

By default, the optimization is partly enabled. You can enable the whole optimization by setting the parameter `CONTRACT_PACKING_ENABLED` to **`true`**.

> **Note**
>
> Do not set the parameter `CONTRACT_PACKING_ENABLED` to **`true`** if the first version of SAP CC that you installed was more recent than CC4.0 SP08. In that case, applying the optimization doesn't provide any benefit because the management of provider contract versions is already optimized.

> **Note**
>
> Modifying a provider contract for the first time after you set the parameter `CONTRACT_PACKING_ENABLED` to **`true`** may be longer than it was usually. This is the time needed for optimizing the versions of the provider contract. If you modify the provider contract once again, it will not

CustomerCustomer
© 2015 SAP SE or an SAP affiliate company. All rights reserved.

be longer than it was before setting `CONTRACT_PACKING_ENABLED` to **`true`** because the optimization applies only once.

More information

See *SAP CC Parameter Reference* for more information about this parameter.

5.3 Effect on Data

The provider contract has a new attribute called technical status. The technical status enables you to know if the optimization was already applied to a provider contract.

More information

See the column `TECHNICAL_STATUS` of the table `CACO` in *SAP CC Database Reference* for more information about the technical status.

6 WS: No Access Notification (Changed)

6.1 Feature Overview

As of SP09, the Web Services of SAP Convergent Charging are enhanced for returning notifications when an error occurs.

Feature

The charging and the recharging business components of SAP CC Web Services are enhanced for returning notifications on errors generated by the **No Access Function** component.

> **Note**
>
> The **No Access Function** component is used in price plans, refill logics and allowance logics. See the *Core Tool Online Help* and the *Component Reference* for more information about this component.

Benefits

You can use the details in the notification to get information on the reasons why the access to the service was denied.

More information

See *SAP CC Web Services Documentation* for more information about this feature.

6.2 Effect on Web Services

The following Web Services are modified:

- `chargeableItemCharging`. The operations which are enhanced are:
  - `chargeableItemCharge`
  - `chargeableItemChargeMass`
  - `chargeableItemChargeBundle`
  - `chargeableItemCheckCharge`
- `recharging`. The operations which are enhanced are:
  - `chargeableItemRecharge`
  - `chargeableItemRechargeMass`

You can specify in the context of the request if the result contains a notification when an error occurs with a **No Access Function** component.

More information

See *SAP CC Web Services Documentation* for more information about this feature.

7 JCo Update

7.1 Feature Overview

Summary

SAP Convergent Charging 4.0 uses SAP Java Connector to communicate with SAP CRM and SAP ERP FI/CA.
As of SP09, the version of JCo used by SAP Convergent Charging is updated to the version 3.0.13.

Benefits

You automatically benefit from the latest corrections and the new features of SAP JCo.

More information

See the SAP Note 2155739 for more information about this version of SAP JCo.
